Vista Green RV Resort Unveils Major Luxury Expansion in Michigan, Adding Premium Sites, Wellness Spa, and Fine Dining

November 04, 2026

SOUTH BOARDMAN, MI - November 04, 2026 -
Vista Green RV Resort has officially completed a comprehensive expansion project at its luxury RV campground in Michigan. The recent structural and operational development increases the property's overall lodging capacity and significantly broadens the scope of its on-site amenities. By adding new utility infrastructure, permanent structural facilities, and specialized guest services, the resort aims to accommodate the growing demand for amenity-rich recreational vehicle accommodations across the Midwestern United States, specifically within the Michigan tourism sector.

The central component of this infrastructure project is the addition of 50 new RV bays. Each of these new sites is fully equipped with comprehensive utility hookups, including municipal water, sewer connections, and electrical pedestals offering both 30- and 50-amp service to accommodate modern, high-capacity recreational vehicles. In addition to the utility upgrades, each individual bay is fitted with high-speed internet access to support remote work and connectivity requirements for extended-stay travelers. The physical layout of these newly developed bays incorporates dedicated outdoor living spaces. These individualized areas feature durable concrete parking pads, designated seating zones, and privacy screening implemented through the strategic planting of native Michigan flora.

Alongside the increased site capacity, Vista Green RV Resort has expanded its structural amenities with a primary focus on health and wellness. The newly completed wellness center includes a full-scale fitness facility equipped with cardiovascular machines, free weights, and designated areas for flexibility and core training. The property's on-site spa has also undergone significant development and integration into the main announcement of services. The expanded spa introduces cutting-edge hydrotherapy facilities, utilizing temperature-controlled water systems designed for physical recovery. The wellness center is staffed by professionally trained and licensed therapists who provide comprehensive wellness programs that are customized to meet individual guest requirements. Additional therapeutic services now available on-site include expanded aromatherapy sessions utilizing targeted essential oils.

The structural expansion also introduces a new on-site restaurant designed to provide guests with direct access to high-quality dining without leaving the resort grounds. The restaurant operates on a locally sourced culinary model, partnering with regional Michigan agricultural producers to secure seasonal ingredients. The menu is structured to cater to a variety of dietary preferences, focusing on health-conscious meal options that complement the resort?s overall wellness initiatives.

To supplement the physical facility upgrades, Vista Green RV Resort is launching a comprehensive schedule of seasonal programming and structured guest activities. These organized initiatives include guided nature hikes led by knowledgeable personnel who introduce guests to the regional ecosystem and terrain. Furthermore, the resort hosts culinary instructional classes featuring demonstrations by local chefs, as well as multi-day wellness retreats that utilize the newly expanded spa and fitness facilities. These programs are designed to facilitate structured, immersive stays for visiting travelers.

The physical expansion of the resort was executed in strict accordance with Vista Green RV Resort?s established environmental management policies. The facility utilizes solar energy systems to offset power consumption across its main administrative and recreational buildings. Additionally, the property operates functional rainwater harvesting systems, which collect and repurpose precipitation for the irrigation of the resort grounds. The groundskeeping protocols rely strictly on sustainable landscaping practices, prioritizing drought-resistant, native plant species that require minimal chemical intervention and promote local biodiversity.

"We are pleased to open these expanded facilities, which increase our capacity to host visitors while supporting our environmental management practices," said John Bennett, General Manager of Vista Green RV Resort. "Our objective is to provide comprehensive infrastructure for RV travelers while maintaining a functional integration with the surrounding natural environment."

This expansion supports Michigan's broader tourism industry by providing accommodations that draw out-of-state RV travelers, thereby contributing to the regional economy and supporting local businesses beyond the resort's immediate borders.
