

822 Heat and Air Launches Fall Furnace Repair and Replacement Program Across DFW

November 19, 2026

Benbrook, TX - November 19, 2026 -
822 Heat and Air has introduced a Fall furnace service program designed to prepare residential and commercial heating systems for the winter season throughout the Greater Dallas-Fort Worth Metroplex. The initiative focuses on seasonal maintenance, safety inspections, and timely repairs intended to reduce the risk of system failures during the coldest months of the year.

The program includes seasonal tune-ups, combustion safety checks, and diagnostic assessments for a range of heating equipment, including gas and electric furnaces, heat pumps, and ductless mini-split systems. Technicians address common seasonal issues such as failed igniters, blower motor failures, control board malfunctions, and venting problems. The service is available in Arlington, Fort Worth, Dallas, Grand Prairie, Cedar Hill, and surrounding communities.

Safety is a central element of the program. Inspections include carbon monoxide and combustion safety checks, along with evaluations for conditions such as cracked heat exchangers and improper venting. These

assessments are intended to identify hazards before heating systems enter the high-demand winter period.

The program also assists property owners in deciding between repair and replacement. Technicians assess furnace age, repair frequency, and overall efficiency, then provide plain-language explanations of repair options and gas furnace replacement costs. This approach allows clients to make informed decisions without pressure.

"Many heating problems begin as small, manageable issues that go unnoticed until the first cold snap," said David, Director of Operations at 822 Heat and Air. "The Fall program gives property owners a clear picture of the condition of their systems so they can address concerns before they turn into emergencies during the busiest part of winter."

The company noted that the demand for heating service rises sharply as temperatures drop, which can lead to delays when systems fail unexpectedly. Early seasonal maintenance helps distribute that demand and allows technicians to complete a thorough review of each system before peak usage begins.

"Transparency matters to the people we serve," David added. "When a client understands the age and efficiency of a furnace, they can weigh repair against replacement with confidence. The goal is a safe and reliable heating system, not an unnecessary upgrade."

All technicians involved in the program are licensed, insured, and EPA-certified. Financing options are available for replacements and new installations, subject to credit approval and offer eligibility. The seasonal focus complements the year-round work the company performs, which also includes ac repair and cooling system maintenance during the warmer months.

822 Heat and Air is a professional HVAC company providing commercial and residential services, including HVAC installation, ductwork, furnace repair and replacement, and AC tune-up services. The company uses current technology and methods to support indoor comfort and energy efficiency throughout the year. It serves Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and communities throughout the Greater DFW Metroplex and surrounding suburbs.
