

822 Heat and Air Expands Commercial and Residential HVAC Services Across DFW Metroplex

November 20, 2026

Benbrook, TX - November 20, 2026 -
822 Heat and Air has expanded its commercial HVAC installation and air conditioning repair services to meet growing demand across the Greater Dallas-Fort Worth Metroplex. The expansion broadens the contractor's capacity to handle complete system installations for both large-scale commercial buildings and residential homes throughout its service areas.

The heating and air conditioning contractor specializes in full HVAC installation, serving customers in Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and surrounding suburbs. The expanded offering reflects rising activity in both commercial construction and home system replacement across the region.

As a residential hvac company, 822 Heat and Air provides installation, repair, maintenance, and complete system replacement for gas furnaces, electric furnaces, heat pumps, central air conditioners, and ductless mini-split systems. The company's technicians are licensed, insured, and EPA-certified, and they handle

permitting and code compliance on installation projects.

The expansion adds capacity for commercial clients who require personalized heating, cooling, and ventilation solutions for larger buildings, while maintaining the company's established residential work. The team performs load calculations and ductwork design to ensure systems are correctly sized for each property, a factor that affects both energy efficiency and long-term performance.

"Demand for complete system installation has grown steadily on both the commercial and residential sides, and expanding these services allows the team to respond more quickly," said David of 822 Heat and Air. "Proper sizing and installation make a measurable difference in how a system performs over its lifetime, which is why the focus remains on accurate diagnostics and honest recommendations rather than unnecessary upselling."

The company's residential hvac installers manage every stage of a project, including gas line connections, venting, ductwork adjustments, and thermostat setup.

The contractor advises homeowners to consider system replacement when equipment reaches 10 to 15 years of age, when repairs become frequent or costly, or when energy bills rise despite regular maintenance. The company also notes that systems using phased-out refrigerants, such as R-22, are candidates for replacement. For existing systems, 822 Heat and Air also provides furnace repair addressing common failures such as faulty igniters, flame sensors, blower motors, control boards, and gas valves. Safety-first assessments, including carbon monoxide and combustion checks, are part of the company's standard heating service approach.

"Many customers are uncertain whether to repair or replace an aging system," David added. "The approach is to lay out the facts on age, repair history, and efficiency so each homeowner can make an informed decision. Transparent pricing before any work begins is central to how the team operates."

822 Heat and Air offers seasonal maintenance plans that include scheduled tune-ups and priority service, along with emergency repair services for situations when heating or cooling systems fail. Financing options are available for replacements and new installations, subject to credit approval and offer eligibility.

822 Heat and Air is a professional heating, ventilation, and air conditioning company serving commercial and residential clients throughout the Greater DFW Metroplex. The company provides commercial HVAC, residential HVAC, ductwork, and AC tune-up services, with a focus on energy efficiency, safety, and transparent pricing.
