Evry Aesthetics Expands Operations with Opening of Dedicated Aesthetic Treatment Center

November 03, 2026

ELMHURST, IL - November 03, 2026 -
Evry Aesthetics announces the opening of a new facility to expand its operations among med spas in Elmhurst, IL. This development increases the availability of aesthetic treatments for local residents. The expansion involves the establishment of a centralized location in the Elmhurst municipality to provide cosmetic dermatology services. The newly constructed facility operates with an administrative team and medical personnel focused on delivering specialized skincare and non-invasive treatments.

The Elmhurst facility functions as a dedicated center for cosmetic procedures. The building features structured treatment areas equipped for various modalities. The physical layout incorporates designated zones for consultations, procedure administration, and patient observation. Operations at this location involve standardizing protocols for aesthetic medicine, ensuring consistency across all scheduled appointments. The administrative framework accommodates a high volume of daily appointments while maintaining strict compliance with structural health and safety regulations. Personnel hired for this location undergo specific training regarding the operation of newly installed equipment and adherence to standardized facility procedures.

Evry Aesthetics provides a specific range of services at this location. To consolidate repetitive references to standard cosmetic procedures, the facility highlights distinct service categories, including laser skin therapies and injectable treatments. The operational roster features the Revitalize Experience, a protocol utilizing HydraFacial technology alongside a structured nutrient infusion process. This combination targets dermal hydration and exfoliation through controlled mechanical application. Furthermore, the location performs routine skin care regimens. The medical staff administers these treatments based on established clinical protocols within the field of aesthetic medicine.

Beyond the administration of physical treatments, the Elmhurst location functions as an informational hub for aesthetic practices. The organization has scheduled a series of workshops and seminars to be hosted within the facility conference spaces. These educational events are structured to deliver factual information regarding dermatological science and cosmetic technology. Guest speakers and internal practitioners will

present data on skin health maintenance and the mechanics of various non-invasive procedures. The objective of these seminars is to provide the local demographic with objective data regarding aesthetic treatments, facilitating a broader understanding of technological developments within the field.

In conjunction with the physical expansion, Evry Aesthetics is launching an interactive digital platform. The company website will host a blog focused on the publication of case studies, research findings, and technical commentary on cosmetic dermatology. This digital resource aims to centralize information concerning aesthetic medicine for public access. The platform will operate as an ongoing repository of industry data, documenting the operational mechanisms of various skincare treatments. Articles published on this platform will undergo a review process to ensure the dissemination of factual, verifiable information regarding skin health and procedural outcomes.

The management of Evry Aesthetics has implemented specific operational systems to sustain the new facility. These systems include digital appointment scheduling, electronic medical records management, and automated inventory tracking for clinical supplies. The integration of these administrative tools allows the facility to monitor resource allocation and maintain adequate stock of necessary materials for all aesthetic procedures. Furthermore, the location utilizes centralized sterilization equipment to maintain clinical hygiene standards across all treatment rooms. The operational framework ensures that the facility functions efficiently during standard business hours.

The preparation of the Elmhurst location required coordination with local zoning boards and commercial real estate developers. Construction phases involved the installation of specialized electrical and plumbing systems to operate clinical equipment, including medical-grade laser devices and aesthetic treatment stations. The architectural design prioritizes functional workflow, allowing practitioners to move efficiently between consultation rooms and procedural areas. Environmental controls within the building maintain specific temperature and humidity levels necessary for the storage of sensitive cosmetic products and the optimal operation of technological equipment. This infrastructure investment reflects the logistical requirements of operating a modern aesthetic facility.

Staffing for the Elmhurst facility includes a combination of licensed medical professionals, certified aestheticians, and administrative personnel. Prior to the commencement of operations, all employees participated in a comprehensive orientation program. This training covered facility-specific protocols, emergency response procedures, and privacy compliance regarding patient records. Clinical staff completed additional certifications related to the operation of the specific cosmetic devices utilized at the location. The organizational hierarchy includes a designated medical director who oversees all clinical practices and ensures adherence to established medical guidelines during the administration of aesthetic services.

The establishment of this location represents a functional expansion of the Evry Aesthetics operational footprint. The facility is fully operational and accepting appointments for all listed services. Individuals seeking factual information regarding available procedures can contact the administrative desk. This development alters the landscape of med spas in Elmhurst, IL by providing an additional facility for cosmetic dermatology.
