Wind, Not Hail, Is the Hill Country?s Roofing Threat: Austin Roofing Company Outlines What Dripping Springs Custom Homes and Metal Roofs Need

November 19, 2026

AUSTIN, TX - November 19, 2026 -

Austin Roofing Company, a Central Texas roofing contractor that has worked in Dripping Springs since 2008, is highlighting how roofing in the Hill Country differs from the Austin suburbs to the east. Custom homes on acreage, standing seam metal roofs, steep rooflines that follow the land, and long rural driveways all change the work, the company says, and so does the weather. Here the bigger threat to a roof is wind rather than hail.

?Out here in the Hill Country, things are different,? the company writes on the page for its Dripping Springs roofing contractor services. Many homes there aren?t subdivision houses but custom builds with complex rooflines, multiple pitches and metal panels, and when something goes wrong, the page says, ?You need someone who actually knows what they?re looking at.? The company has worked in the area since before Belterra existed and before Caliterra broke ground, when it was mostly ranches and custom homes on large lots, and it serves rural properties off Ranch Road 12, Hamilton Pool Road and Fitzhugh Road without charging extra to reach them.

The weather is the reason Hill Country roofs wear differently. Dripping Springs sits west of the main Hail Alley, so severe hail is less frequent than in Round Rock or Pflugerville, though storms still come through. The open terrain and elevation, however, bring more sustained wind and stronger gusts than sheltered suburban neighborhoods, stressing shingles, flashing and fasteners, and Hill Country wind can loosen metal panels and ridge components. Clear skies add intense UV exposure that breaks down roofing materials over time, and hot summers, occasional freezes and daily temperature swings expand and contract roofs until fasteners loosen and seals break. The company says wind-resistant installation matters more there than in the suburbs.

Those conditions are why metal is so common across Dripping Springs. The company describes metal roofing as wind-resistant, durable under UV and strong in thermal performance, typically lasting 40 to 70 years with minimal maintenance, though it costs more upfront. It installs and repairs standing seam metal roofing, metal shingles and other metal systems, and handles the problems specific to them, including loose panels, exposed-fastener failures, and leaks at seams, penetrations and the transitions between steep and low-slope sections. Its replacement planning often weighs a new shingle system against a conversion to standing seam metal, and the page is careful on that point: ?The estimate can compare suitable materials without assuming the highest-priced system is right for every home.?

The company publishes its 2026 Dripping Springs price ranges. A minor repair runs $350 to $750 and a metal roof repair, such as seam work, fastener replacement or coating, $300 to $1,500. A standard architectural shingle replacement on a 1,800 to 2,500 square foot home runs $10,000 to $16,000, while large custom homes of 2,500 to 4,000 square feet or more with complex rooflines run $16,000 to $30,000 and up. A standing seam metal roof runs $18,000 to $40,000 and up, and an upgrade to Class 3 or Class 4 impact-resistant shingles adds roughly 10 to 15 percent. Rural access, steep pitches and remote logistics all affect pricing, and most Dripping Springs replacements take two to four days.

Storm chasers reach the Hill Country too, though less often than areas closer to Austin. They canvass newer neighborhoods such as Belterra and Caliterra and drive out to rural properties, counting on owners not having local recommendations. The company advises homeowners to check that a roofer has real metal roof experience, writing that quality roofing comes from local contractors who know the Hill Country, ?not out-of-state crews who can?t tell a standing seam from a shingle.? Its broader rule is simple: ?Choose your roofer. Don?t let one choose you.? And for homes that represent significant investments, ?cutting corners on roofing isn?t worth the savings.?

Beyond homes, the company works with the wineries, wedding venues, distilleries, breweries, restaurants and retail businesses that define Dripping Springs, coordinating schedules around events, guests and deliveries. It also partners with custom home builders on new construction and coordinates with masons where roofing meets limestone and stone accents. For storm damage, it documents conditions with photos

and video, attends the insurer?s adjuster inspection, and advocates for supplements when required roofing items are missing from the approved scope, reminding owners that claims typically must be filed within one to two years of the storm.

About Austin Roofing Company

Austin Roofing Company, formerly known as Altair Austin Roofing Company, is a family-owned Central Texas roofing contractor that has served homeowners since 2008. The company provides metal and shingle roof installation, repair, replacement, storm damage repair, inspections and commercial roofing across Dripping Springs, Hays County and the greater Austin metro, with 24/7 emergency service and same-day response for active leaks.
