

Bennett Mobile Truck Repair Opens 11,000-Square-Foot Heavy-Duty Truck Repair Shop

November 10, 2026

VALDOSTA, GA - November 10, 2026 -
Expansion adds a dedicated repair facility to the company?s mobile operations, supporting commercial trucks, fleets, RVs, heavy equipment, and trailers.

Bennett Mobile Truck Repair opened its new heavy-duty and semi-truck repair shop at 1740 Airport Road in Valdosta on September 21, 2026. Now operational, the 11,000-square-foot facility expands the company?s established mobile repair business, providing a dedicated location for mechanical repairs, diagnostics, and fleet maintenance. The property also includes additional outdoor parking and storage space to accommodate overflow work.

The expansion gives owner-operators, commercial fleets, local businesses, and travelers another option for addressing repair needs throughout South Georgia. Alongside heavy-duty and semi-trucks, the shop services RVs, motorhomes, heavy equipment, and trailers.

?Opening this shop is an expansion of the mobile service our customers already know,? said Adam Bennett, owner and lead mechanic of Bennett Mobile Truck Repair. ?We wanted a dedicated facility where we could take on more involved repairs and scheduled fleet maintenance while continuing to respond to customers on the road. Having the shop and three mobile service trucks gives us more ways to support the people and businesses that depend on us.?

A Dedicated Facility for Diagnostics and Mechanical Repairs

The new shop provides space for work that requires equipment, access, or time beyond what is practical at a roadside location. Customers can arrange shop service for extensive mechanical repairs, troubleshooting, and preventive maintenance instead of relying exclusively on a mobile visit.

Available services include diesel engine diagnostics, electrical troubleshooting, brake and air system repairs, cooling and fuel system repairs, and driveline service. The facility also supports transmission and clutch replacement, DPF and emissions system service, and trailer repairs involving axles and suspension components.

The indoor facility and additional outdoor space give Bennett a physical base for coordinating shop projects alongside ongoing mobile calls. Customers can contact the company to explain symptoms, share fault codes, and discuss whether their vehicle or equipment would be better served through a shop appointment or an on-site response.

Fleet Maintenance and Scheduled Service

Commercial fleet maintenance is another focus of the expanded operation. Businesses can coordinate preventive maintenance, inspections, and mechanical repairs around vehicle availability and operating schedules.

Fleet customers can discuss shop drop-offs or on-site maintenance at their yards, depending on the work required and scheduling availability. This flexibility supports businesses managing multiple vehicles while providing a way to address maintenance concerns before they develop into unexpected interruptions.

For independent drivers and smaller businesses, the shop also offers a location for planned service between assignments. Equipment owners and RV travelers can arrange repairs based on their particular mechanical needs rather than waiting for a roadside emergency.

Shop Service Backed by 24/7 Mobile Assistance

The company continues operating three mobile service trucks for roadside and on-site repairs. Its mobile diesel repair service remains available 24 hours a day, seven days a week, including assistance at truck stops, job sites, fleet yards, campgrounds, and locations along I-75.

Regular shop hours are Monday through Friday, 7 a.m. to 5 p.m. After-hours repairs are also accepted; customers should call to confirm arrangements and availability.
