

USA Cabinet Store Details How Aging-in-Place Features Fit Into the Bathroom Remodeling Process

November 06, 2026

Chantilly, Virginia - November 06, 2026 -
USA Cabinet Store has outlined how homeowners can incorporate aging-in-place features into a standard bathroom remodel at its Chantilly showroom, explaining where each accessibility decision falls within the company's six-step bathroom renovation process. The guidance comes as western Fairfax County contends with a steadily aging population.

Fairfax County's Demographic Reports 2025, released by the Department of Management and Budget, project the county's 65-and-older population to grow about 68 percent over 20 years, from 190,605 residents, or 15.9 percent, in 2025 to 320,966 residents, or 23.9 percent, in 2045. On the national level, Harvard's Joint Center for Housing Studies found that the number of homeowners remodeling for accessibility reached 3.2 million in 2022-2023, up from 2.3 million in 2018-2019, with owners 65 and older the most likely to undertake such work at 5.5 percent. NAHB data reported by Harvard identifies bathroom work as the most requested accessibility project, and owners 65 and older accounted for 27 percent of home improvement spending in 2023, up from 14 percent two decades earlier.

The Chantilly showroom focuses on features drawn from its bathroom remodeling services, including curbless and walk-in showers, easy-entry showers, and in-wall blocking for grab bars and a shower bench. Each ties to a specific stage of the project. During the initial consultation, held in person, at home or virtually, designers assess the space and take measurements. A 3D and VR design meeting renders fixtures and finishes before the homeowner commits, so shower entry, bench and grab bar locations are settled at that point. Final measurements and planning confirm the layout against the bathroom's plumbing and electrical. Demolition and construction then remove old fixtures, damaged drywall and outdated plumbing before new plumbing, shower enclosures and fixtures are installed. A final walkthrough with the project manager closes the project.

Timelines for the bathroom renovation process run about two to six weeks of construction, and roughly two to four months from signed contract to final walkthrough once design, ordering and permits are included. Typical on-site time is about two to three weeks for a like-for-like hall bath, three to five weeks for a full gut with the same layout, and six to eight weeks or more for a custom primary suite.

"Building accessibility into a remodel while the walls are open is far simpler than retrofitting those same features years later," said Emin Halac, CEO of USA Cabinet Store. "In my view, settling grab bar blocking and a curbless shower entry during the design meeting means homeowners get an aging-in-place bathroom that looks like any other finished space, without a second round of demolition down the road."

Halac added that the design-first approach lets homeowners in Chantilly, Centreville, Fairfax, Herndon and the surrounding area see those choices rendered before construction begins.

USA Cabinet Store is a kitchen and bath company headquartered in Chantilly, Virginia, with 13 showrooms across several states. The company provides bathroom remodeling, kitchen remodeling and cabinetry services, along with countertops, tiles, sinks, faucets and hardware. It has served more than 1,000 homeowners and received the NKBA Innovative Showroom Award at KBIS 2026.
