

TLG Launches Five-Model E-Bike Lineup for Adults, Backed by 60+ Authorized Dealers Nationwide

November 10, 2026

ONTARIO, CA - November 10, 2026 -
TLG launches its lineup of five electric bikes built for adult riders, from daily commuters to cargo haulers and off-road riders. Every TLG ebike for adults draws on two decades of electric-mobility engineering and is available through a nationwide network of 60+ authorized TLG dealers across the U.S.

TLG builds e-bikes for the way people actually live, from daily commutes and errands to family time and weekend rides. The goal is simple: make every ride feel easier, more capable and more enjoyable. Each model is designed to feel comfortable when the ride gets longer, capable when life asks for more and intuitive every time a rider gets on.

Instead of one all-purpose design, the TLG lineup is organized around how people ride. It covers cargo and passenger use, step-through commuting, relaxed city cruising, fat-tire trail riding and long-distance utility travel, with prices from $1,699 to $2,999. Every battery pack in the range is built with Samsung or LG lithium cells.

The TLG DUO, priced at $1,999, is a fat-tire cargo and utility e-bike made to share the ride and carry more. A 750W, 100Nm motor works with a 720Wh battery rated for up to 70 miles, or up to 140 miles with an optional extender.

The TLG GlideOn, also $1,999, brings step-through comfort to daily travel and makes mounting easy. Its 750W peak hub motor produces smooth power assistance with support of TLG Nitroburst when more torque is required, and its 720Wh battery is rated for up to 70 miles, extending to 110 miles with an optional extender.

The TLG SOLAY opens the range at $1,699 with a pedal-forward frame designed for lighter cruising around town. A 48V powertrain and a 480Wh battery deliver a rated 55 miles of range, or more than 75 miles with an extender.

The TLG AmpTrail, priced at $2,199, takes riders and their gear beyond pavement on 26 by 4.0-inch fat tires. It combines a 750W, 100Nm motor with a 505-pound payload capacity and a 720Wh battery rated for 70 miles, expandable to 1,440Wh and more than 140 miles.

The TLG SummitRide, priced at $2,999, is a step-through utility and commuter e-bike for longer trips and heavier loads. Its 1,440Wh battery expands to 2,160Wh for a rated range of 125 miles, or more than 200 miles with an extender, and it carries up to 400 pounds.

Several models include TLG NitroBurst, a one-tap function that delivers up to 120 percent of peak motor power on demand. The DUO, AmpTrail and SummitRide run on 100+Nm motors, while the GlideOn and SOLAY are tuned for commuting and city riding. Each model comes with its own range, payload and frame specifications so riders can match a bike to their daily routes.

Ownership is backed the same way across the full lineup. The TLG limited warranty covers the complete bike for two years from the date of purchase when the bike is registered within 60 days, and the frame is covered for the lifetime of the original owner. Coverage applies to bikes bought on tlgmobility.com or from an authorized TLG retailer, backed by its industrial leading and currently complementary 5 Year Total Shield program.

TLG partners with independent bike shops that offer local guidance before and after a purchase, and authorized TLG dealers now operate more than 60 locations nationwide, including California, Florida, Idaho, Indiana, Kentucky, Michigan, New York, North Carolina, Ohio, Pennsylvania, Texas, Utah and Virginia.

The TLG dealer network includes Pasadena Cyclery in Pasadena, California, Bert's Bikes and Fitness stores

across upstate and central New York, D&D Bicycles locations in southern Michigan and Scheller's Fitness and Cycling stores in Indiana and Kentucky. The TLG store locator finds the nearest store by city or ZIP code and shows each store's address, phone number and opening hours. Test rides, assembly and fit, repair support and store pickup are arranged directly with each dealer and vary by location.

Buying from an authorized TLG dealer gives riders what an online cart cannot: the chance to test-ride each model, compare five very different bikes side by side, and get honest local advice before spending a dollar. After the sale, the dealer handles professional assembly and fit, first-month adjustments, warranty service and accessory installation ? so the bike is dialed in from day one, and there is a real shop to walk into when something needs attention. TLG's retail strategy is built on that experience, and its marketing and store locator point riders toward authorized dealers because that is where the best ownership experience starts.

Pricing, specifications and dealers interested in joining the TLG network for each ebike for adults can learn more at tlgmobility.com.
