

Copperhead Construction & Remodeling Highlights Kitchen Functionality for Midvale Homeowners

November 16, 2026

Midvale, Utah - November 16, 2026 -
Copperhead Construction & Remodeling, a family-owned contractor serving Salt Lake County, is drawing attention to the role that kitchen functionality plays when homeowners weigh a remodeling project. The company has shared guidance for Midvale residents on evaluating how an existing kitchen performs before any design or construction work begins.

The guidance encourages homeowners to study the way a kitchen is used each day rather than focusing solely on appearance. According to the company, the manner in which a room supports cooking, cleaning, storage, and household gatherings often reveals the most important opportunities for improvement.

A central theme involves workflow. The company notes that the distances between the sink, cooking surface, and refrigerator influence how efficiently meals are prepared. Homeowners are encouraged to observe where congestion occurs, where counter space runs short, and how multiple people move through the room at busy times. These observations frequently shape decisions about layout changes later in the process.

Storage is another area the company highlights. Cabinets that are difficult to reach, drawers that no longer meet household needs, and pantry space that falls short can affect daily routines. By identifying storage gaps early, homeowners can prioritize solutions that address practical concerns rather than cosmetic ones alone.

The company also points to the way a kitchen supports the broader household. A room that serves as a gathering place, a homework station, or a space for entertaining carries different requirements than one used strictly for cooking. Understanding these patterns helps align a remodel with how a family actually lives.

This emphasis on function forms a core part of the approach Copperhead Construction & Remodeling kitchen remodeling planning brings to each project. The company works with homeowners to document current frustrations and goals before moving into design decisions, which it says helps produce results that match real household needs.

"A kitchen can look appealing and still work against the people who use it," said Ralph Kunz, an owner of Copperhead Construction & Remodeling. "When homeowners take time to notice how the room functions day to day, they make clearer decisions about what to change and what to keep."

Kunz added that local experience informs the company's recommendations. "Many homes in this area share common layout challenges," he said. "Understanding those patterns allows the team to suggest changes that improve workflow and storage without unnecessary complexity."

The company reports growing interest among property owners who want kitchens that reflect how their households operate. Copperhead Construction & Remodeling in Midvale serves homeowners in Sandy, West Valley City, Murray, and surrounding communities throughout Salt Lake County.

Copperhead Construction & Remodeling is a family-owned construction company based in Utah, offering residential and commercial services. Its work includes whole-home remodels, home additions, kitchen and bathroom renovations, commercial remodels, basement finishes, and outdoor living spaces. The company follows a structured process that includes in-home consultation, design planning, transparent estimates, skilled execution, and final inspection. Copperhead Construction & Remodeling is fully licensed and insured and maintains a focus on quality workmanship and clear communication throughout each stage of a project.
