

Superior Overhead Doors Highlights Warning Signs of Worn Garage Door Springs

November 16, 2026

BROKEN ARROW, OK - November 16, 2026 -
Superior Overhead Doors, a locally owned garage door company serving the Tulsa region, is working to help homeowners recognize the early warning signs of worn, damaged, or failing garage door springs. The educational effort builds on the company's recent guidance about garage door opener issues and addresses a separate but related component that plays a central role in safe door movement.

Garage door springs carry much of the weight of a door during every opening and closing cycle. Over time, these springs lose tension and can wear down, crack, or break. According to Superior Overhead Doors, several symptoms often signal that springs may no longer be supporting normal door movement. These symptoms include difficulty opening the door, uneven or jerky movement, a sudden change in how heavy the door feels, and visible gaps or separation in the spring coils.

Todd Willhoite of Superior Overhead Doors noted that spring problems are frequently mistaken for other issues. "When a door suddenly feels much heavier or refuses to lift smoothly, many people assume the motor

has failed," Willhoite said. "In a large number of cases, the real cause is a worn or broken spring. The opener may be working exactly as intended, but it cannot overcome the added weight when the springs are no longer doing their part."

The company cautions homeowners against attempting to inspect or repair springs without proper training and tools. Springs operate under significant tension, and mishandling them can cause injury or further damage to the door system. Superior Overhead Doors recommends professional evaluation when any of the warning signs appear.

Willhoite added that a complete assessment of the door system often reveals connections between components. "Springs, cables, and alignment all affect how a door moves," he said. "A proper diagnosis looks at the entire system rather than a single part. That approach helps homeowners address the correct problem the first time."

Superior Overhead Doors in Broken Arrow performs repairs with its own trained technicians and does not rely on subcontractors, which allows the same team to handle both diagnosis and service. The company's familiarity with the systems commonly installed in area homes supports accurate identification of spring-related concerns.

Alongside spring and opener work, the company handles garage door cable repair, tune-ups, installation, commercial garage door services, and overhead door repair. A showroom allows customers to view garage door options and meet the technicians who service their homes. For residents facing opener difficulties as well, Superior Overhead Doors garage door opener repair in Broken Arrow remains part of the company's range of services.

Superior Overhead Doors has served the Tulsa area for more than 18 years. The locally owned and operated company provides garage door spring repair in Broken Arrow and related services across multiple counties in Oklahoma. Its technicians focus on first-visit resolution and whole-system diagnosis, reflecting the company's emphasis on accurate repairs and safe door operation for homeowners and businesses throughout the region.
