

Coventry All-on-4 Implants Private Dentist Adds More Appointments From November 2026 for Teeth Replacement Consultations at Light Lane Dental Practice

November 19, 2026

COVENTRY, UK - November 19, 2026 -
Light Lane Dental Practice has added more appointment slots, starting from 15th November 2026, for All-on-4 dental implant consultations in Coventry. The appointments are open to patients considering full-arch teeth replacement. They give patients a chance to find out whether the treatment could suit them, and to ask questions before any decision is made.

All-on-4 dental implants are a treatment concept in which four titanium posts are placed into the jawbone to support a full arch of replacement teeth. The approach is used for patients who have lost most or all of the teeth in the upper or lower jaw, or who are facing that loss. Where treatment is clinically successful and the implants fuse with the surrounding bone, the replacement teeth are fixed in place rather than taken out for cleaning, as dentures are.

Whether the approach is suitable depends on clinical assessment. The amount of available bone, the health of the gums, and the patient?s overall oral health all influence the plan, and the treating clinician decides how many implants are used. In some cases, additional dental procedures may be needed before implants can be placed, and these are explained during the consultation.

A 2011 longitudinal study titled ?A Longitudinal Study of the Survival of All-on-4 Implants in the Mandible With Up to 10 Years of Follow-Up?, published in the Journal of the American Dental Association (DOI: 10.14219/jada.archive.2011.0170) by Malo P, de Araújo Nobre M, Lopes A, Moss SM, and Molina GJ, followed 245 patients treated with 980 immediate-function implants in fully edentulous mandibles. It reported cumulative implant-related success rates of 98.1% at five years and 94.8% at up to 10 years, with an overall prosthesis survival rate of 99.2%. The findings are specific to the mandible and the patient group studied and should not be generalised as expected outcomes for all patients or for treatment at Light Lane Dental Practice.

Treatment insights about All-on-4 dental implants at Light Lane Dental Practice can be found at: https://lightlanedental.co.uk/missing-teeth/all-on-4-implants-in-coventry/.

A consultation by the implant dentist begins with an examination of the teeth, gums, and jaw, with scans or X-rays where clinically indicated. The dentist reviews the patient?s dental and medical history, discusses what the patient hopes to achieve, and explains the treatment options, the likely stages, and the expected timescale. Patients can ask questions, and no treatment goes ahead until the plan has been explained and agreed.

Not every patient with missing teeth needs a full-arch solution. Dental implants can also replace a single tooth or several teeth. A titanium post is placed in the jawbone and a crown or bridge is fitted on top, matched to the surrounding teeth. The choice depends on how many teeth are missing and the condition of the bone and gums.

Gaps left by missing teeth can affect how a person bites and chews, and neighbouring teeth may gradually shift towards the space. Over time, the jawbone beneath a missing tooth can also lose volume. These effects vary between people.

The broader range of dental implant treatments available at the practice can be viewed at: https://lightlanedental.co.uk/missing-teeth/dental-implants-in-coventry/.

Teeth implant treatment is usually carried out in stages. After the implants are placed, they need time to fuse with the bone before the final teeth are fitted, and this period varies between patients. Temporary teeth may

be fitted in some cases where the clinical assessment supports it, but this is not routine and depends on individual circumstances.

Patients attending a consultation may find it helpful to note their main concerns, how long the teeth have been missing, and any previous dental treatment, along with any medical conditions or medication. This gives the dentist a clearer picture at the start of the appointment.

Light Lane Dental Practice is a private dental practice serving patients in Coventry. The practice provides care for patients with missing teeth, including implant treatments, and patients are seen on an individual basis, with recommendations based on clinical assessment rather than a fixed plan.

Further information about Light Lane Dental Practice and their dental team can be found at: https://lightlanedental.co.uk/.

Light Lane Dental Practice can be contacted directly to arrange a consultation or to ask questions beforehand. Patients from Coventry and the surrounding area are welcome to enquire about availability for additional appointments.
