

Laserpraxis Mühlebach Introduces Laser Acupuncture Service at Medical Laser Practice

November 25, 2026

November 25, 2026 -
Laserpraxis Mühlebach, a medical and aesthetic practice in the Canton of Lucerne, has added laser acupuncture to the medical treatments available to patients across the Lucerne region. The non-invasive service applies laser technology to acupuncture and trigger points as an alternative to traditional needle acupuncture.

The practice is led by Dr. med. Sandra Mühlebach-Knopf, an FMH specialist in general internal medicine who holds additional qualifications in sports medicine and in laser treatments of the skin and mucous membranes (FMCH). The practice combines medical and aesthetic applications of laser technology within a single setting.

Laserpraxis Mühlebach laser acupuncture uses a point laser to stimulate acupuncture and trigger points rather than inserting needles. The approach is based on the same principles as traditional needle acupuncture. In clinical research, laser acupuncture and related low-level laser therapy have been studied for musculoskeletal and pain-related conditions, with several systematic reviews reporting mixed findings and

noting that the overall body of evidence remains limited and that further controlled trials are needed. The practice notes that laser acupuncture is frequently combined with low-level laser therapy, a form of photobiomodulation that applies low-intensity light to tissue. As with any medical treatment, suitability depends on individual assessment, and outcomes vary between patients.

No referral from a general practitioner is required for laser acupuncture, though patients are encouraged to confirm coverage details with their insurance provider in advance. Treatment is structured around individual assessment, and the practice follows a factual, personalized approach to care.

The broader range of Laserpraxis Mühlebach laser treatments extends beyond pain management to include aesthetic procedures such as laser hair removal, the treatment of pigment spots and small facial veins, skin rejuvenation, and scar treatment with laser. The combination of medical qualifications and laser certification held by the practitioner allows the practice to offer both medical and aesthetic laser applications.

Laserpraxis Mühlebach is a medical and aesthetic practice in Eich, Canton of Lucerne, Switzerland. Under the direction of Dr. med. Sandra Mühlebach-Knopf, the practice offers medical treatments including laser acupuncture and low-level laser therapy, alongside aesthetic treatments such as laser hair removal, the treatment of pigment spots and small facial veins, skin rejuvenation, and scar treatment with laser. The practice provides personalized care for patients across the Lucerne region.

Information about each treatment, along with updates from the practice, is available through the Laserpraxis Mühlebach press room and the practice social media channels. Further detail on individual services is published on the practice website, laserpraxismuehlebach.ch.
