

Dry Air Systems Introduces New Video for Ductless Heat Pump Contractor Selection in Newburyport MA

November 20, 2026

NEWBURYPORT, MA - November 20, 2026 -
Dry Air Systems Inc., a family-owned HVAC company established in 1989 and based in Newburyport, Massachusetts, has published a new video outlining important considerations for homeowners who are evaluating ductless heat pump installation. The video, titled "Ductless Heat Pump Contractor Newburyport Massachusetts - Dry Air Systems," was released on November 17, 2026, and is intended to help homeowners understand the factors that influence long-term system performance.

The video centers on three considerations that homeowners face when selecting a contractor for a ductless mini-split heat pump project. The first is a thorough evaluation of a home's individual heating and cooling requirements. The second is the selection of appropriate locations for both indoor and outdoor equipment. The third is ensuring proper installation, a step that directly affects efficiency and reliability over the life of the system.

Dry Air Systems has served homeowners across the region for more than three decades. The company holds

the Mitsubishi Elite Diamond Contractor designation, is recognized as a Mass Save Heat Pump Installer, and has been acknowledged as a Massachusetts Heat Pump Leader, subject to verification. As Dry Air Systems a Ductless HVAC Contractor, the firm provides installation, repair, and maintenance services to residential, commercial, and institutional clients throughout its service area.

The company serves Newburyport and surrounding communities, including Haverhill, Salisbury, Amesbury, and Ipswich in Massachusetts, as well as Hampton, New Hampshire. Dry Air Systems is also featured in the Ductless Directory as a vetted and approved contractor.

"Choosing the right contractor is one of the most important decisions a homeowner can make when investing in a ductless heat pump system," said Michelle LaFrance, Founder of the Ductless Directory. "Proper system evaluation, equipment selection, and installation all play critical roles in long-term performance. That's why we're pleased to recognize Dry Air Systems as a vetted and approved ductless heat pump contractor."

The company's recognition as the Top Ductless Heat Pump Contractor in Newburyport Massachusetts reflects its focus on tailored solutions rather than standardized recommendations. Chuck Brunelle, Vice President of Dry Air Systems Inc., noted that the company's approach is rooted in understanding each home individually.

"Dry Air Systems has been family-owned and operated since 1989, and we're proud to continue that tradition under our second generation of leadership," said Brunelle. "Every home has unique heating and cooling requirements, so we take the time to understand each homeowner's needs rather than recommending a one-size-fits-all solution. Our goal is to match every customer with a system that makes sense for their home."

Brunelle added that the breadth of the company's team allows it to address projects of varying scope. "What sets Dry Air Systems apart is our commitment to customer satisfaction and the experience our team brings to every project. Whether a homeowner wants to add air conditioning to a single room or explore a whole-home heat pump system, our team of more than 80 skilled professionals is prepared to help them evaluate their options and deliver a properly installed solution."

Dry Air Systems is a family-owned and operated HVAC and plumbing service provider based in Newburyport, Massachusetts. Established in 1989, the company offers heating, cooling, plumbing, indoor air quality, ductless HVAC, geothermal, and heat pump services across the Massachusetts North Shore, Southern New Hampshire, and nearby communities.
