822 Heat and Air Expands Commercial HVAC Services for Large-Scale Projects

November 20, 2026

Benbrook, TX - November 20, 2026 -
822 Heat and Air has expanded its commercial heating and air conditioning offerings, broadening the scope of installation and repair work available to businesses and property owners across the Greater Dallas-Fort Worth Metroplex. The expansion positions the company to handle larger commercial projects alongside its established residential service base.

The contractor, which serves communities including Granbury, Crowley, Burleson, Benbrook, Fort Worth, Arlington, and Dallas, specializes in complete HVAC installation for both large-scale commercial and residential customers. The expanded commercial focus reflects growing demand for professional heating and cooling work among businesses throughout the region.

As part of the broader service lineup, 822 Heat and Air provides commercial and residential installation, repair, and maintenance. The company works on gas heaters, electric heaters, heat pumps, and ductless mini-split systems. Its technicians are EPA-certified, and the business operates as a licensed and insured HVAC contractor under license TACLA65080C.

The expansion emphasizes installation work, including hvac vent installation designed to improve airflow and temperature consistency across commercial and residential buildings. The company also performs gas furnace replacement for systems that have reached the end of their service life, along with ductwork examination, duct sealing, and new duct system design for new construction and renovation projects.

A representative of 822 Heat and Air, said the expanded commercial capacity responds directly to demand from local businesses. "Commercial properties have heating and cooling needs that differ from a typical home, and larger buildings require careful system design and sizing," they said. "Expanding commercial installation and repair work allows the company to serve those projects with the same transparency and workmanship applied to residential jobs."

The company reports that it approaches each project by diagnosing issues accurately and advising clients when a repair is more cost-effective than a replacement. Customers receive upfront pricing and an explanation of the work needed before any installation or repair begins. Safety-first inspections include checks for carbon monoxide and combustion safety during furnace work.

The representative noted that the company intends to maintain its service standards as project volume grows. "The goal is to remain an hvac services pro that clients can rely on for honest assessments, regardless of whether the project is a single-family home or a commercial facility," they said. "Growth only matters if quality holds steady."

Common issues the company addresses include uneven heating or cooling, rising energy bills, weak airflow, thermostat malfunctions, and unusual system noises. For older equipment, the company identifies indicators that may point toward replacement, such as systems older than ten to fifteen years, frequent repairs, and the use of phased-out refrigerants.

822 Heat and Air is a heating, ventilation, and air conditioning company serving both commercial and residential clients throughout the Greater DFW Metroplex and its suburbs. The company offers commercial HVAC, residential HVAC, ductwork services, and AC tune-up service, with financing available subject to credit approval and offer eligibility. The business emphasizes energy efficiency, safety, and transparent pricing across its service areas in North Central Texas.
