

822 Heat and Air Unveils Expanded Furnace Repair and Replacement Services for Homes and Businesses

November 20, 2026

Benbrook, TX - November 20, 2026 -
822 Heat and Air has announced the expansion of its residential and commercial heating services, offering complete furnace and HVAC installation and repair throughout the Greater DFW Metroplex. The move broadens the company's capacity to serve both large-scale commercial clients and homeowners seeking heating solutions during the colder months.

Based in Benbrook, Texas, the company specializes in complete HVAC installation for commercial and residential customers. The expanded service lineup covers seasonal maintenance, accurate diagnostics, complete system replacements, and new installations for a range of heating systems, including gas and electric furnaces, heat pumps, and ductless mini-split systems.

As part of the expansion, the company's residential hvac installers perform load calculations to determine the appropriate system size for each home, accounting for factors such as insulation and window upgrades. The process guides homeowners through efficiency levels and features such as two-stage heating and

variable-speed blowers, with options ranging from standard to high-efficiency models.

For homeowners weighing repair against replacement, the company assesses each system based on its age, condition, and repair history. A Benbrook furnace replacement is recommended when a system is beyond cost-effective repair, typically for units older than 10 to 15 years, those requiring frequent service, or systems still operating on R-22 refrigerant, which is being phased out.

"Transparency matters as much as technical skill in this trade," David added. "Customers receive upfront pricing before any work begins, and technicians explain the options in plain language without unnecessary upselling. The goal is to keep homes and commercial spaces comfortable and energy-efficient throughout the year."

The company addresses a range of common heating issues, including failed igniters, blower motor failures, control board malfunctions, and gas valve problems. Each service includes safety inspections such as carbon monoxide and combustion checks, along with verification that installations meet local codes and permitting requirements.

"Many households wait until a system fails completely before calling a furnace repairman, which often leaves them without heat at the worst possible time," said David, owner of 822 Heat and Air. "The expansion allows the team to respond quickly to both emergency repairs and planned installations across the region, and to give customers honest guidance on whether a repair or a full replacement makes the most sense for their situation."

The company's technicians are licensed, insured, and EPA-certified. Beyond furnace work, 822 Heat and Air provides commercial HVAC solutions, ductwork installation and repair, and AC tune-up services designed to keep systems operating at peak efficiency. Seasonal maintenance plans are available for customers seeking scheduled tune-ups and priority service, and financing options are offered for replacements and installations, subject to credit approval.

822 Heat and Air is a professional HVAC company providing commercial and residential services across Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and the surrounding Greater DFW Metroplex and suburbs. The company focuses on comfort, energy efficiency, and reliable service, applying current technology and techniques to heating, ventilation, and air conditioning projects of all sizes.
