

Consumers Comfort Inc. Releases New Smart Thermostat

July 26, 2016

July 26, 2016 - PRESSADVANTAGE -

Consumers Comfort Inc., a company based out of Ontario, Canada, has introduced a Smart Thermostat. Examples of this kind of thermostat are the Nest and Ecobee thermostats, which allow users to control temperatures throughout a house through their mobile or computing device, even when they are away.

One of the major goals of the new Smart Thermostat, as reported by Consumers Comfort Inc., is to cut down on heating costs, and create a more economic option for home owners. Winters in Canada can get quite cold, and knowing that a house is constantly heated, whether empty, or filled with pets, plotted plants, or visiting relatives, is important.

Also called a Wifi Thermostat, the new design is easily maintained through an internet connection, whether the user is at the office, on vacation, or out walking the dog. It also allows for programmable temperature changes, and sends alerts when certain changes occur. Consumers Comfort Inc. writes: "For you to understand the benefits of a wifi thermostat, first you will need to know how these thermostats function. Mainly, a wifi thermostat, also known as a smart thermostat is a programmable thermostat that you can control with any of your mobile or computer device that can access the internet. To that end, this device is the

next advancement of cooling and heating power in your house."

Along with the innovative Wifi connect function, homeowners can manage the Smart Thermostat from any computer, laptop, tablet, or even mobile phone. The app allows users to change temperature controls, and also monitor thermostat usage and efficiency, which provides a unique look at potential ongoing billing, and provides insight into possible methods of saving heat and money. The company explains: "Another benefit is that, over time, the wifi thermostat will learn your habits as the homeowner, and it will be updating the system as it sees fit. Nonetheless, you should keep in mind that you can always adjust this manually. Further, the model can alert you when the temperatures fall and rise out of your programmed temperature ranges. Also, it will provide you with your monthly usage reports."
