## **Cave Armor Expands Online Presence With New Home Safety Website**

*July 26, 2016*

July 26, 2016 - PRESSADVANTAGE -

North Canton, Ohio based Cave Armor has launched a brand new website dedicated to home security and defense. The Cave Armor team has asked that those interested in getting a better understanding of home defense and gun safety to come check them out here to learn more.

The new website touches on a number of subjects, including the top 10 most popular handguns for home defense, 9 crucial questions to ask when buying a gun safe, home security in the summer, and more. Each subject is documented in a way that is designed to keep readers interested and also well informed at the same time.

Articles found on the site cover a variety of tips and life hacks for homeowners, including ways to add defensive layers in any season. For example, in summer, the team offers the following advice for locking down a fort: "Companies manufacture many burglar-resistant mesh screen windows and doors that offer unobstructed views of outside. If you add a good door or window system over them, you double your home security by providing an extra layer of defense. In the end, it is better to invest in a high-quality mesh and a decent door than to pour money into really strong doors and windows that you will occasionally leave

unlocked or open."

Gun safety is a common theme across the site, making it simple for homeowners to determine whether or not they should purchase a weapon, which gun is the best fit for home security purposes, as well as ways to create a safe living space for all family members when there is a gun in the premises. Cave Armor offers advice to gun owners who are also parents by saying: "Having your ammo and guns stored separately makes a world of difference when kids are around. Both ammunition and guns should be separated, and stored in different locked containers."

The Cave Armor team invites interested parties to contact them via their new contact page online. By entering a name, subject, and email address, individuals can speak directly with the home security site owners and seek out specific advice which has yet to be documented online.
