

# **Petforu Announces Dog And Cat Collar With Pet Tracker**

*May 19, 2015*

May 19, 2015 - PRESSADVANTAGE -

Petforu has announced the launch of their dog and cat collar with pet tracker device, which can be used to locate lost pets in real time. The collar also has capabilities to be utilized as an electric fence tool to keep animals within a certain boundary while at home. The company believes that the collar not only assists owners in finding cats and dogs that have strayed, but also helps prevent pets from straying in the first place.

When the Petforu pet tracker collar is on boundary mode to keep pets from straying from a specific area, it alerts the owners when the dog or cat leaves the space for which the "electric fence" feature has been specified. This area can be predefined by the pet owners to work anywhere, including home, work, or the city park.

The pet tracker is currently being offered through the Petforu Amazon sales channel, found at [www.amazon.com/Pet\\_Tracker](http://www.amazon.com/Pet_Tracker). The product retails at \$75.99 and uses real time GPS/GSM to show pet owners where their pet is located to within an accuracy of 5 meters or less. The battery can be used for up to 240 hours when fully charged, which allows the Petforu pet tracker to continue tracing pets long after they have gone missing.

When consumers visit [www.amazon.com/Pet\\_Tracker](http://www.amazon.com/Pet_Tracker) to purchase the device, they will find that the product is lightweight and created using high quality nylon materials for the comfort of the pet. Those who purchase the collar will also gain access to a free web tracking platform which works on PCs, laptops, tablets, and most mobile phones, including Android devices. This can be downloaded onto devices as an application and used whenever the pet owner requires knowledge of where their pet is.

The Amazon sales portal for the device gives solid directions on how to utilize the tracking feature and website software, and the company encourages customers to read these steps before trying to use the product. There are also a number of photographs of the collar, both on its own and when worn by a pet, for those interested in seeing what it looks like when placed on a dog.

The device uses a SIM card, and works in South and North America, as well as other areas across the world. Those interested in buying the device or wanting to learn more about it can do so by visiting the Amazon portal. Interested parties will also be able to view all of the positive customer reviews on the Amazon product page. The Petforu pet tracker comes in blue, and is suitable for a variety of sizes of pets.
