OmniPharma has recently launched their product line, consisting of Novella Advanced lotion, on the giant online shopping portal, Amazon. Novella Advanced is a cream that is used for psoriasis treatment and dry skin.

This Novella Advanced psoriasis treatment cream is a great dry skin solution because it may reduce itching while protecting and rehydrating the skin. The formula contains Omega3 and mCollegen, which are important ingredients for relief with hands, backs, elbows, feet and more.

This has been a long awaited launch for the company OmniPharma. Prior to selling on the online portal Amazon, the product was sold in local markets and received with stellar reviews and results. With this in mind, the company wanted to launch to a bigger marketplace and Amazon was a great fit.
