

Worker's Death Following Fall Prompts Comment From Personal Injury Lawyer

August 10, 2016

August 10, 2016 - PRESSADVANTAGE -

LipsigLawyers.com?s Thomas Moverman offered his sympathies recently following the death of a roofer in Haverford, Pennsylvania. Moverman noted the frequency with which these accidents occur and stated that he hopes the family and friends of the worker can find comfort in their time of grief.

According to Patch.com, on July 7, a 37-year-old man fell 25 feet to the ground at a Haverford work site while working on a roof. According to the article, the OSHA has cited his death as the latest of five incidents since June 13, 2016, that resulted in the death or injury of workers without proper fall protection. The OSHA issued a statement regarding the accident, indicating that their thoughts and prayers are with the family and that they will not tolerate employers who jeopardize worker safety.

The most common forms of injury in the construction business include slips, trips, and falls. These types of accidents in addition to electrocution and being stuck between objects or struck by them, accounted for over half of construction worker deaths in 2014, according to the Bureau of Labor Statistics. The OSHA reported that more than 20 percent of all work-related fatalities in 2013 were employed in the construction industry and that one in five of the 4,821 reported fatalities in 2014 were also in the construction industry.

Lipsig, Shapey, Manus & Moverman have been representing victims of construction accidents for years. The firm is currently looking to assist those individuals who have been injured in a construction accident and qualifying individuals may be entitled to financial compensation. They have successfully obtained millions in settlements for those victims and strongly believe in fighting for the compensation victims need and deserve. In one case, Attorney Thomas Moverman won a victim \$2.6 million for a worker who injured his knee and back in a fall from defective scaffolding.

?Most of these actions help to make our environment and the workplace safer so that others will not have to endure these painful losses,? said Moverman of the firm?s work.
