

Wanderlust Releases Shin Splint Compression Sleeves

August 16, 2016

August 16, 2016 - PRESSADVANTAGE -

Wanderlust, a company in Burlingame, CA, prides itself on creating products that enhance the safety and comfort of people while taking part in physical activities. They have now announced that they have released a new product that allows people to address shin splints using Kinesio taping technology. The shin splint sleeves are currently available exclusively on Amazon.

A representative from Wanderlust says: "Our goal is to make sure people can get out and be healthy in the great outdoors, or through other forms of physical activity. But we also know that sports come with certain risks of physical injuries, so we are always looking at the best products to increase people's comfort and safety. Our new compression sleeves help ease the pain of shin splints that result from running on hard surfaces."

Shin splints are sensations of acute, severe pain in the shins. It is caused by prolonged running, particularly on hard surfaces. Unfortunately, the pain can be so debilitating that it regularly stops people from continuing to run, thereby discouraging them from engaging in such activities. While most people will wear compression socks to combat shin splints, they are often not effective.

Kinesio taping technology, meanwhile, has been shown to be far more effective in addressing shin splints than any other type of sleeve. The technology has been crafted to provide additional support to the posterior and anterior calf muscles, as well as the Achilles tendon. Furthermore, it comes with a cyclonic weave pattern, which ventilates the skin as people move, run or exercise. The special moisture wicking fabric enables users to remain dry and comfortable at all times. It is because of this that the shin splint sleeves are so much more effective than shoe inserts, or any other form of sock or sleeve.

The Wanderlust compression stockings have been designed to fit like a glove. They come with adjustable elastic cuffs to ensure optimal length. This prevents both calf constriction and cutting into the back of the knee. The sleeve's special weave design ensures that the stocking will not roll down or bunch. It is suitable for men and women alike, across a wealth of different sports as well.
