AUTO ELECTRICS & AIR CONDITIONING

Auto Electrician In Welshpool, Western Australia, Now Also Covers Surrounding Areas

September 01, 2016

September 01, 2016 - PRESSADVANTAGE -

Allplant Auto Electrics, a business based in Welshpool, Western Australia, has announced that they now also cover field services for Newman & Paraburdoo alongside their Perth service. The company sets itself apart by the breadth of their services, which include cars, trucks, civil, and mining services.

Phil Bowen from Allplant Auto Electrics says: "Our highly skilled team has extensive industry experience across all facets of auto electrical and air conditioning work, whether you require spare parts, repairs, servicing, a mobile auto electrician or labor hire."

The company has a workshop on Kewdale road in Welshpool, which is fully equipped to deal with all types of repairs and electrical installations in trucks and cars. They also build and custom design systems for a range of different plant applications, including modifying and manufacturing braided wiring harnesses. Furthermore, they provide air conditioning services for mining vehicles, earthmoving equipment, trucks, and cars. They are also registered service agents for Rencool & Sigma, enabling them to design, manufacture, and install air conditioning systems to the highest standards.

Those who have used the services provided by Allplant Auto Electrics have been very happy with their results. The company has received consistent five star reviews on the Allplant Facebook page, from customers in the domestic, civil, and mining industries. Now that they have expanded their geographical reach, they feel that they are better able to support their wide range of clients across Perth and beyond.

"Our business has been doing really well for a long period of time, and we felt it was time to expand our services," adds Phil Bowen. "Naturally, we continue to be fully dedicated to offering the highest quality service at all times, which our customers have come to rely on."

The company has a full fleet of specialist service vehicles available as well. This fleet can be sent out to perform electrical and air conditioning repairs on site. Furthermore, the fleet is regularly used to maintain vehicles in the transport, construction, and mining industries. These are some of the region's most important economic contributors, which is one of the reasons why the company wanted to expand its geographical reach. In so doing, more industries are able to avoid downtime as much as possible.
