

Intelligent Lighting Controls Now Offering Full Array Of Data Line Switchers

August 26, 2016

August 26, 2016 - PRESSADVANTAGE -

Intelligent Lighting Controls, occupying an office space in the Pakwa Business Center multi-use building, is now offering a full line of data line switchers, providing control flexibility for lighting loads in commercial environments.

Intelligent Lighting Controls (ILC) is a lighting control manufacturer founded in 1990. ILC creates and markets energy saving micro-processor based lighting systems and complex switching applications used in commercial environments in the US and Canada.

Almost all ILC hardware and software products have been developed internally. Relays, circuit boards and other proprietary products are assembled off-site per their specifications.

"Final panel assemblies are completed and shipped from our Minneapolis location. We're proud to say that almost all of our products are made in the USA," says ILC president, Jay Carlson.

ILC's provides user-friendly lighting control systems that deliver energy savings, lighting controllers that are supplied with ample capability and are easily network expandable without add-on devices. All products are complete with factory wiring, factory testing, and documentation.

ILC's products are marketed through a network of over eighty independent lighting manufacturers located nationwide, primarily promoting their products to electrical engineers, architects, facility owners and electrical contractors.

"Studies show that installing a lighting control system can save you 50% or more on energy costs while improving workplace comfort and productivity. Our lighting control systems typically pay for themselves within just five years, giving you a high return on investment for many years to come," says Carlson.

Where possible, ILC has made an effort to hire individuals with disabilities and provide purposeful, productive

lives for these people as long term employees.
