CompView Now Offers Complete Audio Video Services

August 24, 2016

August 24, 2016 -
Audio/video integration specialists, CompView, occupying an office space in JGM Properties? Energy Park, offers customized AV integration for businesses and organizations.

CompView is one of the largest audio/video (AV) integrators based in the country, offering access to thousands of top manufacturer product lines with competitive pricing and purchasing contracts. With their dedicated team of project managers and certified technicians, CompView ensures a seamless installation for your AV system needs.

Many companies and organizations are discovering the benefits of having modern AV facilities. Modern AV facilities can empower employee experience, promote business objectives and better enable the consumption of information. CompView helps organizations become more productive by enhancing communication and collaboration through technology.

Commercial audio/video systems transform an environment, changing the way people interact with multimedia. CompView?s expert technicians can integrate a variety of A/V systems into any workplace including: company-wide audio, digital signage, touch-panels, video conferencing and chat, scalable event and presentation equipment, sound masking solutions and more.

CompView?s Model Audio Video Systems (MAVS) enable more efficient communication and collaboration by simplifying AV technology for meeting rooms. People will enjoy quick connectivity, ease of operation with centralized AV control and clear communication through digital technology. The design and custom programming are already done, so customers simply pay for the AV equipment and AV installation services, making it a very cost-efficient option.

?Our goal is to take the guess work out of installing your AV and make it a great experience. Our time-tested project management process ensures we do just that,? says general manager, Dave Ewing. ?Project objectives are agreed upon, the timeline is established, and communication flows back and forth as needs arise.?

Facilities with an integrated audio/video system educate, entertain and enlighten. Beyond updating internal classrooms and training rooms, commercial audio/video differentiates a facility from the competition. Hosting a kickoff or conference in a dazzling facility with advanced multimedia options may be the pivot-point on a major account or stakeholder.

AV technology is also transforming education as schools move away from traditional lecture-centered formats toward team-based, interactive, problem-based learning. CompView can help educators transition into an active learning space by designing areas to support teaching and learning that engages students physically, cognitively and emotionally, strengthening student-faculty interaction and collaborative learning.

CompView has worked with the University of Idaho, University of Oregon, University of Wisconsin and Modesto Junior College to integrate A/V systems into their classrooms and meeting rooms.
