Marketcloud - VertexFX Online Trading Solution on the Cloud

October 24, 2016

October 24, 2016 -
Marketcloud.net, partner of Hybridsolutions.com offers the chance to demo the cloud-based platform through its website. VertexFX is one of the first Forex platforms?s to be offered on the Cloud model.

London UK: Marketcloud.net is pleased to provide its cloud-based VertexFX Forex trading platform developed by Hybrid Solutions, and is offering a free demo of the platform. VertexFX is one of the first Forex platforms to offer as fully functional FX (trading) service on a cloud-based structure. The fully managed platform offers major features such as net trade, close all, one click trading screen and auto trading capabilities which have been built up over the Hybrid Solutions? 14-year history.

A demonstration of the platform in operation can be seen on their YouTube video channel. A free demo download of the platform is available on the Hybrid Solutions main site.

VertexFX is a closed-loop platform that also can be integrated with other trading platforms for clearing purposes. The advanced API capabilities make it easier for both the front end and the back end to develop apps for improving business strategies. MarketCloud is a certified application service provider (ASP), with regulated brokers provided with a fully managed solution for foreign currency exchange trading hosted on a secure cloud setup. Brokers can lease the platform through the hosting service which eliminated the hassle of managing servers or outsourcing to multiple firms.

MarketCloud is open to regulated brokers including FCA, CYSEC, NFA, ASIC and CRFIN. The platform is a leased service so that there are no expensive setup costs or management headaches. The platform is suitable for use in Forex and global markets by dealing rooms, liquidity providers, exchanges, market makers, and brokerage firms.

VertexFX offers a closed-loop trading structure with a back office dealing desk, client terminals, dedicated hosting, white labeling and bridging capabilities. Through the use of the Vertex FX Risk Management Bridge, auto clearing can be provided using liquidity providers.

With many scripts added the platform?s usability is enhanced through the vStore, which allows front and back end users to request developers to build products and download standalone apps, mobile and web apps as well as many more APIs to build a richer and more unique VertexFX platform.
