

Oasis Ahead Releases New Pulsating Sprinkler Head

November 14, 2016

November 14, 2016 - PRESSADVANTAGE -

Oasis Ahead, a new brand for gardening tools, has recently released a residential sprinkler system. The company has now added a pulsating sprinkler head, the Q-250 Sprinkler Head, to their product lineup.

A spokesperson for the company says, "We are happy to announce our next product in the sprinkler line, which is a sprinkler head that fits a number of different sprinklers."

The company states that the Q-250 sprinkler head will fit all types and brands of sprinklers, provided they are a one half inch threaded sprinkler type. Spike and tripod stand type sprinklers are a good fit as is the Oasis Ahead K-200 lawn sprinkler, the first in the company's product line. The sprinkler head offers a zero to 360 degrees watering range, depending on the actual water pressure being used with it.

"You literally just set the angle that you want with one easy setting and let it go," says the company spokesperson. "We designed it for ease of use as much as for functionality, and we believe we've made strides in both areas."

The company states that like their original lawn sprinkler, the K-200, which is the pulsating sprinkler head, also offers an adjustable watering distance of up to 5,000 square feet, again depending on local water

pressure. It provides improved water coverage with just a simple adjustment to break up water stream, and comes with a deflector shield and anti-backsplash arm to improve overall spray pattern and to maximize sprinkler area coverage.

The new sprinkler head is offered exclusively through the Amazon marketplace, and can be seen at <http://www.amazon.com/Oasis-Ahead-Pulsating-Sprinkler-Head/dp/B01G72GWMY>. Those interested can also see the company's other products on their Amazon seller's page.

Oasis Ahead states that their products are thoroughly tested to ensure that they are providing accurate statements regarding their function and capabilities. The company states that prior to release, the sprinkler head was tested to determine the true watering range based on a number of factors, including specific water pressure at the test site. Interested consumers can learn more about Oasis Ahead and the methods they use to test their new products by visiting them on their official website.
