

## **DenadaDance Launches Finger And Toe Protectors In UK**

*November 18, 2016*

November 18, 2016 - PRESSADVANTAGE -

Due to the average person's lifestyle, it is now quite common for people to develop problems with their fingers and toes. Excessive daily typing and walking in uncomfortable yet fashionable shoes can take their toll on people. DenadaDance, a company in Minden, NV, is proud to announce the launch of their new product, the finger / toe protectors in the UK. These are designed to help alleviate many of the most common issues with people's extremities.

Elena Vera, founder and owner of DenadaDance, says: "Our finger and toe protectors are designed to provide relief from corns, hammer toes, blisters, stiffness, and soreness. The soft gelled inner lining and ribbed material work in synergy to ensure people are more comfortable and experience less pain. We're happy to see that so many people have already benefited from the product."

The DenadaDance finger and toe protectors have been designed to provide instant pain relief. Many people also use them as toe separators, stopping their toes from rubbing. These separators are made to be of adjustable length. Shaped like tubes or sleeves, they can simply be cut down to size. And they are stretchy enough to comfortably accommodate anything digit, from the pinky to the big toe. The pack includes a wide

tube and a narrow sleeve to ensure all toes and fingers can be helped.

"We have tried to create something very efficient and versatile," adds Elena Vera. "The sleeves are made of highly elastic material that is also very strong, ensuring the toes and fingers remain stable and supported. You can wear these in your favorite shoes, boots, tennis shoes, roller blades, etc. You can protect your bony toes from shoes rubbing on them. They are the perfect solution for comfort."

The silicone lined finger and toe protectors have already started to receive positive reviews from customers, and are currently rated as a five star item on Amazon UK. Because the tubes can be cut to size, it is also possible to use a single tube on several toes or fingers, simply keeping and using the parts that were not required by the other digit. Most importantly, these protectors help to increase overall comfort.
