Come Clean My Fish Tank Launches New Website

November 30, 2016

November 30, 2016 -
Come Clean My Fish Tank, a company that provides fish tank maintenance and cleaning services to customers in Southern California, has launched a new website. The company has been providing services for quite a while and says that the launch of their website and social media pages were the obvious next step.

"We've been working toward our announcement of 'Come Clean My Fish Tank Launches New Website' for quite some time," says Casey Cortright, founder of the company. "Our goal is to provide more information via the new site for our customers and hopefully to gain even more customers as they find us online."

Cortright states that the company provides quality aquarium services throughout Southern California with personalized design, installation, and maintenance for residents and business owners. The company states that they offer a knowledgeable and reliable staff that covers a wide range of aquarium based needs.

"You can visit Come Clean My Fish Tank's new Facebook page to get more information about the services we are offering," Cortright states. He says that the Facebook page will also be updated with various promotions and new information as these become available.

The website also provides information about the array of services that the company offers, including

information about the coral that Cortright grows and the colorful fish that he houses. He offers delivery service where the fish is taken directly to clients and placed in their tanks.

Cortright states that the company can install and design any aquarium, no matter what the size, and can build the design from scratch or work with existing aquariums. The company offers aquarium maintenance on a regular weekly, bi-weekly, or monthly basis depending on client need and provides all services needed to keep aquariums clean and functioning properly, and to keep fish healthy and thriving.

Cortright says that the new website was designed to offer more information and to provide a glimpse into the various aquariums that the company has designed and built. Those interested can visit the company online or like their new official Facebook page to be kept up to date on new services that they may be offering in the future.
