

Premium 3D Filament Added To Heilbronn Inventory

January 04, 2017

January 04, 2017 - PRESSADVANTAGE -

3D filaments are materials used for 3D printing. Super-filament.de offers premium filament suitable for 3D printing projects. The company offers a variety of products, including PLA, ABS, PC Filament, and many others.

Heilbronn GER: Super-filament.de is pleased to announce that it now offers a range of premium filament products which are manufactured directly by the company for professionals worldwide. Customers can now fully rely on the premium items which will make their 3D printing job easier. This range of filaments allows allow the creation of a wide variety of products which was not possible before. The two main diameters offered by Super-Filament are 1.75 mm and 2.85 mm.

PC filament is one of the special products offered by the company. It is a highly experimental material at present, but one which is ideally suited for 3D printing. For demanding applications, PC type filament is ideal, the company says. It is made of poly-carbonate, which is very hard and tough. The material is high transparency and has high mechanical strength. Typically this type of filament is suitable for professional applications.

Buyers? choice should depend on the work they are doing or object that they are trying to build. Therefore, if anyone who is new in the 3D printing business must learn the different types of filaments available on the market, their purposes and edges against each, before making a purchase.

The filament shop carries a huge inventory of various types of filament. For pressure beginners, the PLA and ABS filament are suggested. These two filaments allow for beginners using 3D printers to create small action figures, key tags and name tags and building blocks. The filament color change gives options in color. ABS is found on a roll which is mounted inside the 3D printer. Two different dimensions are available in this type of material.

The classic colors of red, blue or white are available, but the inventory also includes color-changing filaments which change from rather dark colors to brighter hues. The inventory has been aligned to reflect the most

popular colors. New colors are added in order to take advantage of changing popularity and options. Special filaments include HIPS, PA, PC PETG, PVA, TPE, TPU and WOOD. The conventional products of PLA and ABS Filament are plastics that are easy to print.
