

San Marcos Heating & Air Responds To Heating and AC Issues

January 05, 2017

January 05, 2017 - PRESSADVANTAGE -

San Marcos CA company inspects, services, repairs or replaces heating and air conditioning units, regardless of season. The company responds to customers throughout North County San Diego area.

San Marcos CA: San Marcos Heating & Air and Steve Thompson are pleased to announce that they offer honest and hardworking professional service throughout San Marcos and the surrounding area. The company technicians depends upon client referrals and word-of-mouth building, so every effort is made to exceed expectations and guarantee satisfaction. The professionals have a full range of experience and training to take care of any heating and cooling system jobs and problems. The age of the systems doesn't limit the knowledge of the technicians.

A spokesperson for the company explained, "Our skilled technicians stay up to date with all of the latest equipment, but are also extremely knowledgeable about the inner workings of all of the older systems as well. No matter what type of duct work or ventilation system you have, we can repair and service it with ease. Our experienced and skilled heating and cooling contractors will examine your system, diagnose the problem, and repair your air conditioner as quickly as possible."

An inexperienced contractor working on the HVAC system could make errors which would cause bigger problems and cost much more money. SM Heating & Air ensures that the service and repair work is done right the first time, every time. The technicians may determine that only a simple cleaning or replacement part is necessary, but they can determine if a full replacement is needed when the system is old or the damage extreme.

The certified technicians are skilled in installation of air conditioning systems and will help to determine the equipment and options which are best for the lifestyle of the customer. Whether the customer is in need of a central air system, a room unit, a split system or an evaporative cooler, the technicians can ensure that it is installed correctly. They remove the old unit and clean up after themselves.
