

Solar Company In San Diego Announces Record Lowest Annual Cell Degradation

January 12, 2017

January 12, 2017 - PRESSADVANTAGE -

Sunpower California, a solar power company based in San Diego, recently announced that their solar panels offer customers a longer return on their investment. The San Diego solar company states that while many companies offer a one-time savings, they have solar panels that give customers long term benefits with regards to paying for power.

"Our panels produce 3x the power per square foot as solar city, says Ben Jackson with the solar company. He goes on to state that, "Our panels also set a record for 0.2% annual cell degradation."

Jackson says that solar panels set the Guinness Book of World Records for efficiency at 24.2 percent overall efficiency. He points out that, "Where some companies put more money into their marketing we invest ours in our own product development."

The solar company San Diego residents can go to states that this is an added benefit to customers in a number of ways. Jackson explains, "What that means for our clients is it's only a one-time buy unlike our competitors' offers."

He says that this helps customers to save money, which in turn leads to a larger return on their investment over the time that they have solar panels in place. Customers purchase the panels upfront and pay only one time, whereas Jackson says many solar companies charge customers throughout the life of the panels, which could end up costing more in the long run than if the customer stayed with regular electric power as opposed to solar.

The solar panel company states that they are a non-pressure company, meaning that they do not push their customers into purchasing solar panels. Instead, they outline the benefits and have staff members who explain every aspect of solar power to their customers. Jackson states that because of this approach, they have helped thousands of customers to realize the benefits of solar power for their homes.

Those interested in learning more about the benefits of solar power, and the number of federal credits and rebates that homeowners can take advantage of when utilizing this power source, can visit the solar panel company San Diego residents can rely on through their official website.
