

Vancouver WA Firm Celebrates 33 Years Of Supplying Carbide Chains

January 09, 2017

January 09, 2017 - PRESSADVANTAGE -

Rapco Industries offers a number of high quality carbide chains. The company manufactures carbide tipped chains in all standard pitches and gauges, as well as custom manufacturing for client's specific applications.

Vancouver WA: Rapco Industries and Rick Fowler are pleased to announce that for more than three decades, they have been recognized as the leading supplier for carbide tipped chain saw chains. Thousands of customers use Rapco chainsaw chain products worldwide in over 66 countries, making it the most widely used product of its type on the market. Rapco manufactures chain for both standard and specialty cutting applications. All of the standard pitches and gauges are manufactured by the firm. In addition, the company can manufacture a carbide tipped chain specifically for the customer's application.

Rapco offers two premium grades of carbide chain products. One is intended to be impact resistant and one is perfect to endurance on cutting edges. The latter type allows a carbide chainsaw chain to stay sharper up to 25 times longer than a standard steel chainsaw chain. Whether the customer is dealing with extreme cutting conditions such as fire department roof ventilation, or lighter applications such as ripping, stump removal or firewood cutting, the firm manufactures chains designed specifically. It can also design the best chainsaw chain for the customer's needs.

Speaking for the company, Rick Fowler explained, "Rapco manufactures two familiar styles of chainsaw chain cutting teeth, the chisel and the chamfer. We also manufacture two specialty chainsaw cutting teeth, the Dragon and the Terminator. Each of the four styles of cutting teeth can be ground with an efficient round grind for cutting efficiency or with a flat grind for the best impact resistance when encountering applications requiring impact resistance."

Rapco is the only firm which manufactures multiple designs and configurations of all standard gauges and pitches of carbide chainsaw chain, permitting fitting for most chainsaws, customized to unique cutting conditions and requirements. The chains can easily be re-sharpened, using a diamond sharpener. The firm sells diamond sharpeners to fit bench grinders, as well as small hand-held grinders.
