

# AllFitness Launches Fitness Products Review Website

*January 17, 2017*

January 17, 2017 - PRESSADVANTAGE -

AllFitnessWeb.com offers in-depth details of all the various fitness products which are available in the market today. These details can be taken into consideration before making a purchase.

Miami FL: AllFitnessWeb and Richard B. Reaves are pleased to announce the establishment of their new fitness products review site. It is a location where all the in-depth details of various fitness products are presented in a way that makes sense to the customers. The founders of the site have attempted to organize the site in a way that makes sense, is user-friendly and informative at the same time. Exhaustive research which is done by the site founders is used to further enhance the helpfulness of the website.

The fitness product reviews which are provided on the website include those with a large range of product pricing, since various customers will have different budgets. The reviews are honest and transparent and present products which represent the best selection in the marketplace. The details included are simplified to make them easy to read and digest. The descriptions define how the product can benefit the customer as a good value.

The posting of articles on budget activity trackers includes the Fitbit Alta, Fitbit Charge 2, Jawbone UP3 and UP4. The bands measure factors such as steps, estimated calories burned, resting heart rate and detailed sleep graphs. Many of the bands are similar in appearance and are the same in features which are offered.

The features which are included in one or more of the reviewed products are the compactness, and built in screens. The bands are made of smooth hypoallergenic TPU rubber. The USB charger is magnetically attached to the underside of the device. The Jawbone UP4 has a built-in wireless payment system. The payment system is activated by a NFC chip and American Express card. Bio-impedance sensors provide heart rate, both the passive heart rate and the resting heart rate. The activity monitoring is noted and tracked using a tri-axis accelerometer located within the activity tracker.
