

Ryli Computer Experts Launches Campaign to Promote SSD PS4 Drives

January 18, 2017

January 18, 2017 - PRESSADVANTAGE -

Ryli Computer Technology, an online firm that helps computer users by reviewing hard drives, has launched a campaign to promote Solid State Drives. The online firm launched this campaign last week to educate PS4 owners who find the 500 GB hard disks on the gaming devices inadequate to embrace the faster PS4 PRO SSD drives.

"We are launching this campaign to show PS4 gamers that they could have an even better experience on their console by installing SSD drives. We also want to inform people who are still not aware that they could swap their gaming console's hard disk, Juan Whitman, the company's founder said. "We have also partnered with dealers of large 1TB and 2TB SSD drives, to enable every gamer buy only the best device," Whitman added.

While normal hard drives are cheaper and available with average gamer, Ryli computer experts say that the devices don't always offer the experience avid gamers wish for. On average, the experts say that a normal hard disk will be 8 times slower when compared to an SSD drive. Hard drives are however much cheaper, which is why most people choose to stick with them even when they probably hold less space. Ryli experts think that their campaign will be successful considering that most gamers are ever willing pay an extra price for a better gaming experience.

Ryli computer technology promises to help their readers to get the most suitable drives, even if it means advising them on alternative disks that are cheaper but equally efficient for an average PS4 gamer. In addition, the company hopes to promote genuine storage devices only, which is why they have partnered with the best dealers of SSD devices. Ryli has strongly recommended to buy SSD disk with a rating of above 4.5.

"We don't want anyone to get rid of their good hard drives and settle for a low quality SSD. It will be counterproductive in the end. Anyone who is serious about PS4 hard drive upgrade can check for devices from major brands and settle for a good drive with a rating of 4.5 and above," Joe Carmel, the company's

spokesperson said.

Solid state drives have been in the market for a while now, and computer experts have been showering them with praises all along. In article documented by Ryli computer experts for instance, SSDs are praised for being more reliable in high weather conditions, invulnerable to shock and more portable than the sometimes bulkier hard drives. In addition, SSD drives have the advantages of speed, better performance and are by far less power consumers. The drives have a few drawbacks however, but Rylis promises to help clear the drives? features better before advising anyone to buy or dismiss the product altogether.
