

Real Carriage Door & Sliding Hardware Company Launches Four New Wood Species

January 31, 2017

January 31, 2017 - PRESSADVANTAGE -

Real Carriage Door & Sliding Hardware Company offers an inventory line of twelve different wood species in ten styles each. The company recently launched four new wood species: walnut, white oak, maple and cherry.

Gig Harbor WA: Real Carriage Door & Sliding Hardware Company and owner Don Rees are pleased to announce that the leading barn doors provider has recently launch four new wood species to add to their inventory of twelve different wood species with a total of ten styles in each specie. The new products are walnut, cherry, maple and white oak. The company manufactures both indoor doors and the hardware for the doors. The craftsmanship, excellence and innovation of the company professionals is of the highest quality.

Real Sliding Hardware is based in Washington State and uses local natural resources and talent in the products it supplies. Reclaimed Douglas Fir bar doors and hand-forged hammered hangers are representative of the pride in everything which is produced. The team embraces the art of working with raw

materials and creative diligence to produce something which is extraordinary.

According to owner and CEO Don Rees, "We began as a timber frame builder, designing custom out-swing carriage doors to enhance the homes we built. The success of Real Carriage doors led to Real Sliding Hardware and ultimately to Real Barn Doors. We lead the way in barn door products and invite customers to Build Real?."

There are some key differences which set the company apart from its competitors. Many orders ship on the same day, while most in-stock products ship within one to three business days. The hangars arch proportioned in an architecturally elegant design. The track rail is flat and 1/4-inch thick. The hardware is durable and powder-coated. Finishes are complete on all sides and edges. The kits include cushioned end stops, with anti-jump block plates included for security. Also in the kits are matching door hanger bolts. There are matching wall-mount lag bolts available. The designs are ultra quiet in operation, with custom rail lengths and hole patterns available.
