

Sales Of Water Filters Skyrocket After Perth Children's Hospital Water Contamination

February 09, 2017

February 09, 2017 - PRESSADVANTAGE -

As a result of the recent water contamination at the new Perth's children's hospital, Crystal Water, a business in Golden Bay, Perth, Western Australia, has noticed that sales of their reverse osmosis water filtration system have skyrocketed. It seems that an increasing number of people are becoming aware of the importance of having clean drinking water. Full details about the filtration system offered by Crystal Water are available through their website.

Nick Long from Crystal Water says: "Hearing that lead was found in the water supply to the new children's hospital in Perth was a real shocker for people. The hospital, which cost \$1.2 billion to construct, hasn't even opened yet, and there are already problems. Water regulators have tried their best to reassure people that Perth's drinking water is safe, but the damage has been done now. Luckily, our reverse osmosis water filtration systems can remove almost every contaminant, lead included, from drinking water."

Crystal Water, with website at <http://crystalwaterperth.com.au/>, offers a number of different solutions in an effort to keep everybody safe. They have domestic filtration systems, office systems, full pumps, restaurant and cafe filters and purifiers, and cleaning services for cars, bikes, and planes. They have seen a

tremendous increase in the number of domestic users now looking for Crystal Water solutions, and the company is keen to reassure people that their stock can manage with demand.

Those who have used the reverse osmosis water filtration systems have been very happy with the results. "I really trust the water filters are good and the service is always friendly and efficient," says Pamela W. on the company's website. "Your son came today and he was so helpful and friendly - a really pleasant person to deal with."

Crystal Water has also started a proprietary YouTube channel to give people more advice, information, and guidance about how to use their reverse osmosis water filtration systems, and how it can benefit them. The company's motto is "Clean, pure and chemical free. The way water should be" and they want to help as many people as possible across Perth and beyond achieve that level of cleanliness in their drinking water.
