

Lazo Landscaping Launches Two New Websites

February 01, 2017

February 01, 2017 - PRESSADVANTAGE -

Middle River, Maryland-based Lazo Landscaping offers two new websites. The websites focus on hardscaping and tree service respectively.

Middle River MD: Lazo Landscaping and Jose Lazo are pleased to announce the launch of two new websites, which focus on two main services which they provide. Maryland Hardscaping and Maryland Tree Service are the new websites. They reflect the range of services available at the landscaping firm. The company has been offering services to area residents for more than fifteen years. It is family owned, and includes professional experienced employees with the knowledge to get the job done correctly.

Jose Lazo spoke to an interviewer recently, explaining, "We are based out of White Marsh. Since 2001, Lazo has been dedicated to servicing clients with the best experience. We have more than enough professional experienced employees to get your job done right. Lazo has been offering full landscape service, hardscape, and also snow removal services for customers throughout Maryland and beyond. We service both residential and commercial properties. We are a trustworthy and reliable company that's growing over the years to provide you with total satisfaction."

Hardscaping refers to hard landscape materials which are incorporated into the landscape. Hardscapes include paved areas, retaining walls, stairs, walkways, sleeper walls and driveways. The materials which are used include any hard wearing materials such as concrete, stone, wood and others. The completed projects can include large features or minor elements. Often, water features are included.

The tree services offered by Lazo include a range of tasks. Trimming, removing dead branches or entire trees, maintenance of tree health, stump grinding and offering solutions to weather damage are all included within the professional portfolio of the landscaping firm team. All tree service specialists have the required knowledge and experience to perform the project safely and accurately. They arrive on time and clean up the residue and debris which is associated with some projects, such as stump grinding and tree removal.
