

Philadelphia Dentist Uses Light Technology to Offer Advanced Dental Care

June 10, 2015

June 10, 2015 - PRESSADVANTAGE -

Smile Philadelphian, a progressive dental office based in Philadelphia, now offers an advanced technique for cavity detection and precise color matching for tooth restorations.

This office is run by Dr. Richard Wilson and Dr. Derek Conover. The team of dentists has invested in new and advanced technology in dental care using the creative use of light.

Soprolife Cavity Detection System and Vita Easyshade Shade Matching Device are two of the new additions to Smile Philadelphian's advanced dental technology.

Soprolife is used as a detection tool for dental decay at its early stages. The device uses a camera that produces special light wavelengths; a green light indicates a healthy tooth while a red one indicates the presence of a cavity.

Vita Easyshade is a device used for tooth restorations wherein light wavelengths are used to register the precise shade of your teeth. This color matching technology has been lauded by cosmetic dentists and

general practitioners alike due to its aesthetic appeal.

Other advance technologies used by Smile Philadelphian are Microscope Assisted Dentistry, Picasso Dental Soft Tissue Laser, Identafi 3000, and Sapphire Whitening.

Smile Philadelphian's Microscope Assisted Dentistry uses the Global Systems Microscope to diagnose and treat teeth problems using magnification and illumination technology.

The Picasso Dental Soft Tissue Laser is used for the treatment of cold or mouth sores. The treatment usually takes around two days for complete healing.

Smile Philadelphian is also one of the first few progressive dental offices to offer an early detection oral cancer screening test in 2005, the Vizilite. Updates to technology prompted the offering of Identafi 3000, the latest oral cancer detective device in the market. The device works by projecting the light through a dental mirror, and the Identafi 3000 indicates whether oral cancer lesions are detected.

The dental office also offers both at-home and dentist-supervised teeth whitening services. The Sapphire Whitening is a new addition to Smile Philadelphian's teeth whitening services, which entails only an hour of treatment for whiter teeth.

Smile Philadelphian also offers services such as gum care and treatment, prophylactic dental cleaning, tooth-colored fillings, take-home bleaching, laser power bleaching, dental crowns, dental bridges, dental implants, non-invasive mini-implants, full and partial dentures, Invisalign, snoring appliances, night guards, and anti-decay sealants.

The progressive dental office received a 4.5 star review in Yelp. Some of the reviews to wit are:

"Found this dentist online after doing some research - and I'm glad I found them! The location is very convenient and the office is professional, clean, and comfortable. The staff is very pleasant and personable, which is nice when you're spending 30 minutes with their hands shoved in your mouth! I saw the information for their dental plan and immediately signed up - it more than paid for itself with the first visit alone! I definitely recommend it for anyone who doesn't have dental insurance."
