

Harmcor Plumber Edmonton Firm Adds Water Softeners and Reverse Osmosis Units For Sale

February 06, 2017

February 06, 2017 - PRESSADVANTAGE -

Harmcor Plumbing & Heating offers a range of plumbing services to customers in the Edmonton area. The company has added sales of water softeners and reverse osmosis units to its sales approach.

Edmonton AB: Harmcor Plumbing & Heating is pleased to announce that they now sell water softeners and reverse osmosis units to the full range of plumbing services which are already available. The plumber Edmonton team provides professional quality plumbing and heating services to customers. They are available to respond to emergency services around the clock with highly trained and uniformed technicians. The calls are answered by courteous live operators and personnel to assist. Not only are calls answered 24/7, but there is immediate same-day emergency service.

According to Roy Csuhany, speaking in an interview, "Our locally owned service vehicles are fully stocked so that the plumbing team can respond promptly and dependably. Whether you need a faucet installation or need a brand-new hot water tank, we have the knowledge and experience to meet the needs. We supply both residential and commercial services to meet your needs."

A comprehensive menu of services and products is available through the firm. These include hot water heater repair and replacement, hydronic heating repair and water softener sales and rentals. The technicians can clean drains, and install plumbing systems, whether new or replacement. Plumbing repairs and maintenance tasks are also available. Other products and services are furnaces and tankless water heaters, as well as sump pump maintenance, plumbing renovations and boiler maintenance.

The plumbing business was established in the Edmonton AB area, but all neighboring cities and communities, including Sherwood Park, St. Albert, Stony Plain, Spruce Grove, Fort Saskatchewan, Leduc, Beaumont, Devon, Calmar, and Nisku are all part of the service area. Commercial entities are also served. The plumbing and heating projects will help to improve indoor air quality.

The plumbing service company is built on reliability and professionalism and are committed to completing the

task correctly the first time. Edmonton weather can be brutal and a heater which is out of commission is a challenging and dangerous condition.
