

Window Tinting Yuma Products Recoup Costs

February 07, 2017

February 07, 2017 - PRESSADVANTAGE -

Window Tinting Yuma professionals offer a range of products and services to cut down on glare, UV rays and cooling costs. In many instances, the cost of the products can be recouped through energy savings.

Yuma AZ: The Window Tinting Yuma professionals and Jake Stringer are pleased to announce information about its varied window tinting services. The products are used on automobiles, commercial buildings and residences. The services include removing film as well as auto glass repair or replacement and headlight restoration. The team is also expert in top-of-the-line vehicle LED lighting. The experience offered by the technicians at the firm is extensive and assures the client of high quality service and products.

The Environmental Protection Agency (EPA) has indicated that more than half of monthly utility bills is money wasted. The waste is the result of high cooling costs because of heat coming in through untreated windows. In addition to the heat costs, the top quality protective films can reduce glare by as much as 87 percent. Taking action to tint the windows of homes, commercial buildings and automobiles is a proven cost savings and comfort-enhancing process.

According to Jake Stringer, "Whether your home or office windows need quality tinting or your car needs to have eye-catching car lighting, we have the solutions. We offer tints, film applications and window wrappers to Yuma area clients. We have many years of experience with tinting windows of all shapes and sizes. The products and services we offer reduce glare, increasing safety and helping you to stay cooler in cars, offices or homes."

Summer climate conditions in Yuma are generally hot. At the same time, many people move and live in the area because they want and need sunlight to look and feel healthy. Unfortunately, because of the heat and glare, many home and business owners must close drapes or blinds in order to be comfortable indoors. Adding tinting or film means opening blinds, drawing back the shades and letting natural sunlight flood the house. Homeowners can enjoy the views from the windows without driving air conditioning units too strenuously.
