

Zigabob LLC Released Their Highly Acclaimed Baby Forehead Thermometer Available At A 19% Discount

June 10, 2015

June 10, 2015 - PRESSADVANTAGE -

Zigabob LLC, a business operating from Cheyenne, WY, has released their non contact baby forehead thermometer with a special 19% discount offer. The device, which normally costs \$36.90, is now available for just \$29.90. It is expected the thermometer will quickly sell out as it has before.

"Our non invasive baby forehead thermometer is very easy to use and completely FDA approved", says Bruce Searle from Zigabob LLC. "We believe it is the best baby thermometer on the market available today, and to make sure every parent is able to give their children the best possible care during times of illness, we have released it with the special 19% discount for a limited time only."

The thermometer is guaranteed to give an accurate temperature reading, with a standard variation of just +/- 0.3 degrees. This means that parents can have true peace of mind about the temperature of their children. It is a fully digital device that also has an integrated audio alarm. The alarm will sound if the baby has a fever, leaving parents in no doubt in terms of whether they need to medicate their child or take them to their physician.

Because it is a non contact thermometer, it is also completely hygienic. There is no need to purchase new probes and fiddle to get them on. Furthermore, it means that parents can take their baby's temperature while they are sleeping, without having to disturb them. The device has received various highly positive reviews.

"So I've worked in hospitals before that use these kind of thermometer", says one Amazon customer. "This thermometer was especially useful in measuring their temperature. I also don't have to worry about germs or a thermometer being under the armpit, then the mouth. I'm OCD about cleanliness, so I had to have different thermometers for each kid, then one for the mouth and one for the armpit. No more with this thermometer. It can measure temperature in Celsius or Fahrenheit. It's quick to take temperature. The display is easy to read. It's even easy to use on babies, and we all know how hard temperature is to read on a baby."

One element that many customers are happy about is that it is so easy to use, so long as instructions are followed properly.

"We followed directions as I did below to get the best accurate usage and it did come with two AAA batteries included already", says Jennifer D. Rhames. "Most important, before use, please ensure that the infrared lense on the underside of the thermometer is completely clean. Infrared units are very sensitive - any dust or other matter on the lens will lead to inaccurate readings. The importance of operating with a clean infrared sensor cannot be overstated."

The thermometer comes with an automatic shut off to conserve batteries. Furthermore, it has a 100% satisfaction guarantee. Hence, those who are not completely satisfied with the non contact baby forehead thermometer can receive their money back, no questions asked.
