

Snapsh.com Announces Product Launch

February 27, 2017

February 27, 2017 - PRESSADVANTAGE -

SNAPSH TV offers a free Web TV service which allows for the viewing of dozens of top leading channels from around the world. The viewing options include everything from the news to fun and educational channels.

New York, NY: Snapsh TV is pleased to announce the launch of their Web TV viewing product. The use of the service makes easy watching television from dozens of the top channels from around the globe. Viewers can watch the news from a favorite source, as well as channels of interest to the entire family. The new product provides a concept of television which reflects current shifts and trends in video streaming. The viewing experience is friendly and TV-style format.

Snapsh TV online is adapted to today's changing viewing patterns in which new sources and formats prevail. Customers can use Snapsh from a variety of connected device including computers, tablets, TVs and smartphones.

A representative for the website explains, "We constantly search the internet to find the best streaming television and video channels and aggregate them into a television-like interface. We curate, analyze and classify with dynamic tags the top video and streaming television channels available. These channels are selected from around the World Wide Web and aggregated into our platform. We then analyze the content and assign appropriate tags to them for your convenience."

SNAPSH TV was built as a solution for those who want to switch 100 percent to Web TV but were unable to find a satisfactory option for regular program. The content is typically stored in YouTube and is streamed in a range of apps, but is often fragmented. This makes it difficult to come up with a service which mimics a cable-TV environment. The user is able to find interesting channels to watch, jump, and surf in a familiar and friendly way. Watching doesn't require an on-demand approach.

The approach is the best option as a perfect companion for Netflix service rather than competing with them. The system is a complete and satisfactory experience of 100 percent internet TV to replace their cable

system.

For more information about them, visit the web pages at <https://www.snapsh.com>.
