

Urinary Tract Infection Support Website Partners With Premium Nutrition Company

March 06, 2017

March 06, 2017 - PRESSADVANTAGE -

UTI.co.nz offers support to urinary tract sufferers with a partnership with Biosphere Nutrition. The New Zealand-based supplement company has developed a range of premium nutritional products designed to provide optimal absorption using natural ingredients.

Auckland NZ: Biosphere Nutrition and the urinary tract infection support website, UTI.co.nz are pleased to announce that they have formed a partnership to bring more information and reliable products. UTI.co.nz is a support website for those individuals suffering from urinary tract infections. Biosphere Nutrition is based in New Zealand and is noted for developing premium nutritional products. The products are manufactured specifically for optimal absorption using premium clean ingredients.

The collaboration and partnership formed between the two organizations resulted from the desire of UTI.co.nz to offer readers more than just advice. The UTI treatment product from Biosphere is designed to be fast acting, convenient and taste great. There are no nasty sweeteners or additives. The products are

packaged in easy-to-tear, portable sachets. The product developed by BN utilizes a formula which includes D-Mannose and alkalising minerals.

A spokesperson for the urinary tract infection website explained, "We believe that our new partnership is a step forward toward the improvement of our website in hopes of helping more people. We now offer a great collection of helpful urinary tract infection information in one place, covering everything from what a UTI is, how to prevent them and now some great ways on how to treat them."

Urinary tract infections are the second most common infection in the human body. Nearly half of all women experience a urinary tract infection during their lifetime. A quarter of all women have recurrent infections. Almost all infections are the result of E.coli bacteria entering the urinary tract. The majority of infections are due to sexual intercourse or from incorrect wiping. Women tend to experience more UTIs than men, since the urethra is shorter in women. The E.coli bacteria respond well to the natural extract called D-mannose. The common symptoms of the infection include frequent urination, burning, and pain and pressure in the pelvic area.
