

Agilis Technologies Specializes In Mist And Moisture Elimination Products

March 06, 2017

March 06, 2017 - PRESSADVANTAGE -

Agilis Technologies offers cost effective and efficient designs in quality environmental protection products. The company specializes in evaporative coolers and mist eliminators.

Port Townsend WA: Agilis Technologies and Mark Peters are pleased to announce that their line of mist eliminators and moisture elimination devices are noted for cost effectiveness and efficient designs. The company is proud to live by the motto "Quality Built to Perform". Each employee works to ensure that each customer receives the highest quality service. The company offers solutions which help to reduce the cost of operations, as well as to capture discharges for recycling or for use as an end product.

For seventeen years, the firm has offered technical environmental control solutions to industries across a wide range, including pulp and paper, steel and aluminum rolling mills, rolling mills, ship inlets, food production and power generation. The products are high quality and are built on time. The company works with customers to assure that the costs are compatible with budget constraints, while ensuring exacting standards.

According to a spokesperson for the company, "the line of mist eliminator (<http://www.agilistechnology.com/mist-eliminator>) products legendary. The inventory includes droplet collection devices and moisture control systems. Every industry which deals with the removal of water droplets can benefit from our solutions. The industries include pulp and paper, marine, food processing, mining, data centers, chicken farms, machine rooms and steel mills. Our unique approach to many of these problems has allowed us to succeed where many other mist elimination companies have failed."

An evaporative cooler (<http://www.agilistechnology.com/Evaporative-cooler>) is very efficient, using 75 to 90 percent less energy than HVAC cooling. The company offers a range of unit sizes, from 7000 to 50000 CFM. The equipment has a low initial cost, low maintenance costs and low operating costs. The automated controls are available according to the specifications of the customer. The equipment is designed to utilize minimal amounts of water. The coolers are offered with a lifetime rust-through warranty and axial fans or forward

curved blowers.
