

Link Pyramids Website And Tool Released

March 07, 2017

March 07, 2017 - PRESSADVANTAGE -

The Link Pyramids tool offers a helpful way to create unique content on sites without the need for writing content. The detailed website and blog describes the features to save many hours of effort.

Link Pyramids and Doyle Lewis are pleased to announce the launch of their website and software. The features of the tool include a content generator, as well as a tool for content from an RSS feed for all the client's websites. There is no need to personally create content, saving hours of work. The tool is simple to use and helps to improve the rankings of the customer's website, simply by clicking on a few buttons. No tech skill or experience is required to utilize the features.

The product is beneficial in providing SEO services through the use of keyword optimization. A true range of keywords is supported for linking on different levels. Links to first level sites require very focused keywords. Links that are further removed from the money site can utilize less focused keywords. The LP system makes managing the links very easy.

Speaking for the website, a representative explained, "Our robust reporting detects all of the URLs that the

system generates and makes them easy to access. The reports are used to submit links to RSS services or for link indexing tools. There is a large database of random links. Not all links will point only to other network sites. The tool includes a database of random links which are automatically inserted into posts randomly.?

For users on the Advanced or Enterprise plans, there is access to an API which permits remote management of all aspects of the account. A seven-day free trial is available for prospective customers.

A link pyramid helps to provide better rankings for sites. The best quality links push sites higher in the search engine results page. A few high quality links are more beneficial than many low quality links. The link pyramid lets customers set up fewer sites that launders links to push a few sites higher.
