

Kit Sitting Safe Releases Child Safety Seat Comparison

March 13, 2017

March 13, 2017 - PRESSADVANTAGE -

Wildwood-based website and blog offers a comprehensive description and comparison of child safety seats. The description and comparison looks at three top models and explains pros and cons.

Wildwood NJ: Kid Sitting Safe and Robert Kay are pleased to announce the release of their blog article and reviews of top child car safety seats and other related products and services. The website is a niche blog and website launched in August 2015. The information on the site includes up-to-date news, reviews and advice and explanations about car safety seats for infants and children. The details provided in the article will assist customers in the purchase of the safety seat products.

Child car safety seats can be a major household purchase, particularly for families who have more than one child or more than one car. By reading the car seat reviews the process can become simpler. The customer won't need to spend hours of time in order to compare values due to safety, cost, quality and functionality. In addition to the specifications of the top models, there are links to merchant locations and further product reviews.

A comparison of the Britax Frontier G1.1, 90 and 85 is offered in a recent review. Britax is a top manufacturer in children's car seats and strollers. The company is known for its safe products which are also high quality. The products Britax manufactures are for children of all developmental stages. The Frontier Clicktight model was originally introduced many years ago and followed earlier combination seat models known as the Frontier and Frontier 85.

All three seats are popular, although the Frontier 90 and Frontier 85 models are now retired. The Clicktight version is highly rated in user reviews through the Amazon website. The Clicktight feature and added memory foam are the major differences in the newest model. The combination seats are easy to install and the height and weight maximums make the seat usable over an extended period. The seat offers SafeCell technology, a combination of safety components that provides the child with maximum safety and security.
