

10CarBest.com Releases Best LED Headlights Buyers Guide

March 21, 2017

March 21, 2017 - PRESSADVANTAGE -

10CarBest offers review and a buyers' guide for the top LED headlight options. The descriptions include the best and brightest bulb upgrades for automobile headlights.

Springfield IL: 10CarBest.com and Derek Chase are pleased to announce the release of their new buyers' guide for headlight bulbs. The top ten bulbs on the 2017 market are fully reviewed and ranked. The best LED headlights are described, with the best and worst features of each. In addition to specific information on these best sellers, the buyer's guide offers significant information about the differences between HID and LED and what is best. The guide determines the best heat sinks design, connectors and LED types and choose the best products for today.

Information about what LED headlight kits are and how they work is included in the buyer's guide. HID conversion kits have a large and heavy ballast, as well as the bulb and the adapter wiring. An LED headlight built in the modern style has a box inside, but not a ballast. It operates with totally different technology than

the HID bulbs. Earlier versions of these LED bulbs were fairly complex.

This older style has some major failings, including more than one cable from the ballast to bulb number two. There are odd universal connectors on the side and half the connectors are not waterproof. According to the Buyer's Guide, the best LED style headlight should have molded connectors to plug into the wiring, with nothing between the connector on the bulb. Cooling of the bulb is another feature which is discussed in the guide, and should be part of the selection process.

Another feature to explore, when choosing the top LED is the chip type. Some of the most common types are from Philips and Cree. There are also from cheaper Chinese brands, or knockoff types from Korea or Taiwan. The best choices tend to be more expensive, but also are of higher quality. Each of the noted factors are covered in the detailed reviews of the top bulb choices.
