

LED Pocket Microscope Launched On Amazon

March 22, 2017

March 22, 2017 - PRESSADVANTAGE -

Pasadena, California based company, SF Group, has recently launched a new product onto the Amazon marketplace. The LED Pocket Microscope has become available through the marketplace. Vincent Nell with SF Group says, "This product can take an in depth look at jewelry, jade, diamonds, and many others by magnifying up to 100 times of their original size."

The product which can be seen at <http://amzn.to/2o45zhh>, is made of premium grade ABS and resin lenses materials. This pocket microscope is durable, while the HD resin lenses can see the object clearly.

Vincent Nell also states this pocket microscope comes with 5.43" of length and has a carrying pouch, make it easy to carry this pocket microscope everywhere.

Vincent Nell echoes what the diamond expert at Anne Sheffield Bridal says about how to spot fake diamonds, "If you're looking at the edges of a real diamond, they're always super pointed and crispy. Under high magnification, CZ and other simulants will show abrasions or scratches."

SF Group designed this product with bright LED light to illuminate the view at any dim condition, perfect for giving jewelry an in depth look. More can be seen on the company's Amazon seller's page.
