

Level Up Your Gear Provides Options For A Gaming PC Under \$500

April 06, 2017

April 06, 2017 - PRESSADVANTAGE -

Level Up Your Gear offers information about how to make the best budget gaming PC build under \$500 in 2017. The website also shows top picks within the price point for pre-built gaming computers.

World Wide Web: Level Up Your Gear is pleased to announce the release of a comprehensive list and ranking of the top three DIY gaming computers under \$500. In addition, there is a similar ranking for pre-built gaming computers which cost less than \$500. The descriptions for building one of the budget computers describe the main components and their importance to the finished product. When purchasing a pre-built computer, the description includes where extras can be added in order to make the basic system more powerful.

When building a gaming PC under \$500, the website lists parts which allow the builder to stay on budgetary targets. The major components are the case, CPU/Processor, the motherboard, RAM, graphics card, hard drive and power supply. The picks by the reviewer include an Intel machines as the top pick and two AMD options in the \$500 range.

According to the reviewer, "The Intel build is the top pick for the \$500 budget range. It is based on optimizing each piece of hardware to enhance the gaming purpose. The build is a powerful GeForce GTX card paired with an Intel Pentium dual core chip. In order to stick to the budget, a smaller case is used and the optical drive is omitted. Most people install their operating system from a USB drive and download everything else."

Top picks for the pre-built gaming computers at a price under \$500 include CybertronPC Patriot (Red) TGM1293D Gaming PC in third place; Alienware Alpha ASM100-1580 Console in second place; and CybertronPC Borg-Q (Blue) TGM4213A Gaming PC as the top pick. The reviewer prefers the do-it-yourself option because the various choices can permit a wider range of solutions without overly inflating the budget. The website also includes build options at the price ranges of \$400 to \$800. Even the lowest price models can be further empowered through the use of various upgrades.
