

Lexington Roofing Company Provides Digital Roofing Software

May 02, 2017

May 02, 2017 - PRESSADVANTAGE -

Nicholasville-based Shield Roofing and Restoration offers more than just roof replacement and repairs. They strive to give customers nothing less than the best, when it comes to residential and commercial roofing applications.

Nicholasville KY: Shield Roofing and Restoration and David Lafferty are pleased to announce that the Lexington roofing company uses state-of-the-art digital roofing software to assist in providing estimates over the phone or online. They prefer to use an in-person visit as the best method for getting accurate roofing estimates. The information which is gathered from a consultation allows the firm to justify whether a full roof replacement or a simple repair is needed.

David Lafferty explained to an interviewer, "If your roof has storm damage from high winds or hail, in many cases our licensed insurance adjusters can get you more money for your roof than if you went directly through your homeowner's insurance company. The homeowner's insurance is likely to send out one of their own adjusters to inspect the roof for damage from storms. The insurance adjuster may prescribe a simple repair in an attempt to save the company money."

He continues, "We often see roofs with mismatched shingles or discolored siding due to the insurance carrier trying to cut corners when paying out claims. The carriers send out their own insurance adjusters in an effort to reduce the losses to the insurance company as much as possible. The result is a home which appears shabby and poorly constructed. We help you get the most from your insurance claim by letting us do the paperwork and filing for you."

Shield Roofing employs experienced claims representatives and insurance adjusters who undertake a full assessment of the roof and any underlying damages. There is no charge for the evaluation.

A home is a significant investment which provides protection to the inhabitants. The roof is a major protective shield which prevents harsh climates, hail storms, wind storms, snow and other extreme weather conditions

from having grave effects on the home and internal structure and furnishings.
